

Joyce Solutions Limited becomes the first ADISA Certified Service

Data security risk management experts ADISA award first Certified Service status to migration experts Joyce Solutions Limited

01 August 2014– The Asset Disposal and Information Security Alliance (ADISA) has announced that it has awarded Joyce Solutions Limited (JSC) 'Certified Service' status making JSC the first company to hold this award.

ADISA are experts at managing risk within asset disposal services and are owners of the ADISA range of industry standards which cover a range of data processing services.

Founder of ADISA, Steve Mellings picks up the story, *"I initially audited JSC on behalf of an end user client and was immediately impressed by the professionalism shown at every stage of their process. The meticulous approach to what some would perceive as being a rather simple service meant that they passed all aspects of that initial risk assessment. Following discussion with Paul Joyce, it was clear that this crucial hardware management service suffered from the same inequalities as other data processing services which are covered by our range of Standards."*

JSC's migration services include auditing, de-racking, packaging, secure transportation, and if required cabling services and project management before finally being released back to the data controller.

Paul Joyce, founder of JSC adds *"ADISA accreditation acknowledges and reinforces our commitment to the quality of services we provide and will help our customers to have the confidence they need to ensure their business is in safe hands. In an industry saturated with providers and "specialists" we believe that it's very important to be able to demonstrate an independently verified commitment and understanding to security and quality which recognises and embraces the security challenges that need to be met. We're very pleased to have been awarded the first service accreditation from ADISA and look forward to working closely with them to continually develop and evolve our relationship and understanding."*

ADISA provides industry standards, which are moulding the service delivery landscape today. The benefits will extend to customers who work with JSC or any company certified by one of ADISA's standards.

JSC provides specialist Data Centre and IT infrastructure services to companies in the UK and Europe to help facilitate IT change, delivered to the highest levels of quality with minimum business impact.
