

### **PromptSmart offers first update of popular speech recognition-based teleprompter app**

*Adds user-requested features: text mirroring and larger font sizes. Now patent pending, and offered free for existing users.*

**New York, NY** – PromptSmart, the newest teleprompter app for iPad and iPhone which originally launched in August is offering its first free update (v1.1) which builds on its success as the first public speaking aid to use patent pending speech recognition technology.

New features include:

- **Text mirroring:** PromptSmart can now be used with teleprompter glass
- **Larger font sizes (on iPad):** PromptSmart now has font size options up to 68pt.
- **Adjusted VoiceTrack scrolling:** Improved responsiveness for VoiceTrack scrolling
- **Helpful tips and tricks:** Included popup texts with useful information about features
- **In-app message system:** Customer service is now closer than ever with in-app messaging

**Founder and CEO Eric Sadkin on v1.1: “We are excited and encouraged that our soft launch in August was warmly received and we are extremely grateful that so many of our users have provided excellent feedback both on features they would like and on usability of the app. We planned this update specifically to address these needs so that we can be sure to offer the most advanced teleprompter app available.”**

About PromptSmart:

PromptSmart is the preeminent iOS public speaking aid/ teleprompter app available. With patent-pending VoiceTrack™ speech recognition technology, PromptSmart seamlessly follows spoken words and pauses during a speech, adjusting the speed of scrolling text in real time based on the speaker’s actual words and pace – all without the need for a data connection. Because the speaker is in total control over the scrolling, PromptSmart delivers a more intuitive experience than even traditional teleprompters and needs no speed calibration. PromptSmart also includes a digital notecard feature for speakers who prefer to leverage notes/ outlines rather than fully written speeches. Now, a speaker can stay on-point much easier with functionality to create, edit, arrange, and view speaking notes.

Whatever the speaker’s style, PromptSmart delivers professional tools with cutting edge technology and an easy-to-use interface. PromptSmart is the ultimate presentation companion for anyone getting up in front of a crowd or using a script: public figures, clergy, students, lecturers, video producers/ actors, or even bridesmaids and best men!

PromptSmart v1.1 is available now on the iTunes app store (<https://itunes.apple.com/us/app/id894811756>)

**Who created PromptSmart?**

PromptSmart was born out of a passion for public speaking. As a Communications Fellow at Wharton Business School, PromptSmart CEO and Founder Eric Sadkin coached and mentored students in the art of public speaking. Realizing that many orators would be better supported by an intuitive, speaker-controlled teleprompter and a way to digitally create and display notes, Sadkin also recognized that today's mobile devices could address these needs. With these in mind, PromptSmart was created.
