Color Splash Effect Pro by Lyrebird Studio Invites Fresh, Awe-inspiring Digital Imagery

Enabled for Intel® Atom™ Tablets for Android*

Before the days of color process, photographers would paint color into black and white images, but rather than trying to reproduce every color, they would select objects they wanted to enhance. The effect was compelling and dream-like; it simulated the way memory draws the lasting qualities out of an image.

Now, recreating the atmosphere of our precious life events with photography reaches new, expressive heights with Color Splash Effect Pro. The powerful photo-editing application from Lyrebird Studio is now optimized for Android* tablets powered by Intel® Atom™ processors.

Digital images can be instantly converted to black and white while retaining the original tones. An agile, adjustable brush allows users to draw the colors back in on specific parts of the composition. The results are vibrant, unique creations and photographers can produce as many versions of the same image as they like.

33 filters and 18 light overlays as well as a wide assortment of other tools like filters, textures and frames give these images even more resonance and complexity. The elegant interface allows beginners to experiment freely and professionals to get exactly what they want.

Features of Color Splash Effect Pro for Intel Atom Tablets for Android*

- Stunning, High-Resolution Images
- Black and White Conversion with Original Color Retention
- Brush Tool with Hard or Soft Edge, Opaque or Transparent
- 33 Effects
