AMX Enova DVX Series – Only Conference Room Solution Listed on US DISA Approved Products List

AMX is dedicated to providing world class engineering, top notch design, and delivering reliable, secure solutions to the world's government and military agencies and installations. Designing products deemed secure enough for the US Department of Defense (DoD) as well as other government clients requiring mission critically secure solutions has always been a priority at AMX. Now, AMX has completed the US Defense Information Systems Agency's (DISA) Joint Interoperability Test Command (JITC) Approved Products List (APL) testing.

The Enova® DVX All-In-One Presentation Switcher Series is the ONLY certified conference room control and switching solution listed on DISA's Unified Capabilities (UC) Approved Products List (APL). This means it has been tested and approved by the US DoD as a JITC certified secure conference room solution. There are currently no competing products to hold this certification. US DoD policy specifies that customers on US DoD networks must use a JITC certified product over competing products offering similar functionality that are not listed on the APL.

From the DISA website:

> *"The APL is the only listing of equipment by DoD to be fielded in DoD networks. DoD components are required to fulfill their system needs by only purchasing APL listed products, providing one of the listed products meets their needs."* [1]

With this addition, the UC APL now contains an end-to-end conference room solution based on the Enova DVX All-In-One Presentation Switcher Series. With a wide range of models and options approved, AMX products can securely address a variety of applications.
