## A Private Hybrid Cloud for Any Business

**HubDesk delivers hybrid cloud through enterprise-class hosted workstations with on-premise storage support to small and medium-sized businesses**

HubDesk hosted workstations and the latest Network Attached Storage (NAS) appliances build a simple but effective peer-to-peer, private cloud computing solution. This is a low cost, hybrid cloud configuration that delivers the ultimate combination of power, convenience, privacy, and secure data storage.

Enterprise-class storage is an absolute necessity for all businesses and corporations. Dentists, doctors, sales teams, lawyers, among other professions are calling for discreet and confidential communications and file sharing. The unique solution provided by the integration of HubDesk hosted workstations and on-premise NAS storage technology meets this need and allows professionals to create a private cloud solution.

**Expanding data requirements, mobile workforce, and ongoing cloud security concerns were a clarion call for HubDesk to integrate a scalable on-premise storage solution.**

Using the latest crop of powerful yet affordable NAS devices with the HubDesk platform, provides a private storage solution optimized to support demanding workflow, and productivity regardless of a users location. This end-to-end solution gives users file access from any device and automatically generates instant backups of all work onto an on-premise NAS.

It is a solution that can easily scale-out to meet the future demands of both small businesses, and corporations. Without immense upfront costs HubDesk provides a private hybrid cloud for any size business with low monthly fees.

Higher efficiency, more data security, peer-to-peer backups, HubDesk provides a virtual desktop environment on any device, anywhere around the world. That's enterprising.
