

## Enterprise Security Architecture Fundamentals Training Course (Dallas, Texas)

**Learn how to turn security risks into business opportunities.** The Enterprise Security Architecture (ESA) Fundamentals course is unique because it doesn't focus on technology alone. It also teaches you how to integrate your organization's business objectives into your overall security plan. Great Enterprise Security Architecture protects organizations without limiting business performance — and that's what this course will help you achieve.

The curriculum is an adaptation of the world's best security practices and frameworks, including SABSA, TOGAF, ISO 27000 series, COBIT, NIST, and PCI-DSS. Taught by one of the only three SABSA Chartered Master Architects in North America, this three-day, 10-module training course is designed to be an applied learning experience with real-world security practitioners in mind.

### Learning Objectives

- Understand what architectural frameworks and standards exist
- Understand how ESA integrates with current business and IT standards and practices
- Understand how ESA methods assure business value and create new opportunities
- Learn the fundamentals of risk management for enterprise and systems assurance
- Learn how to assess and model critical business relationships and trust relationships
- Learn how to create effective Security Program Governance
- Learn techniques used to define security services and solution architectures
- Understand how an ESA can assure long-term enterprise success and resiliency

### Who Should Attend?

This course is ideal for security and risk management professionals, architects, IT and network practitioners, and executives wishing to gain a greater understanding of building a business-driven security program. It includes three days of instructor-led classroom-based training (24 CPEs). Upon successful completion, you will be awarded an Enterprise Security Architecture Fundamentals Certificate of Completion.
