Now Optimized for Android* Tablets Powered by Intel® Atom™ Processors

The era of smart devices has ushered in a new level of convenience and entertainment but it has also made personal data more vulnerable. Many people are carrying sensitive information around right on tablets and so in order to protect that information, SpSoft introduced the Smart App Lock. Now optimized for Intel® Atom™ processor-based Android* tablets, the Smart Lock App delivers an elegant collection of customizable security options so that users' personal data remains private.

All application information is safeguarded by selecting either a password, pattern or gesture to gain access. Ingoing and outgoing calls can be locked, and a whitelist of locations can be easily adopted so that users can be selective about their locations. Another handy feature is the SMS remote lock, which enables users to prohibit invasive activity, even when they are separated from their devices. After repeat failure to gain access to tablet information, the app can be set to take a picture of the intruder so that users know who was attempting to gain entry to their devices.

Smart App Lock is the Wise Choice in Protecting Android* Tablets

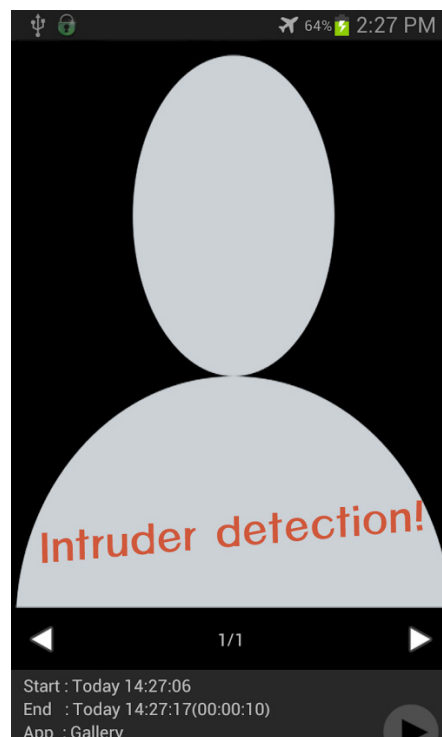

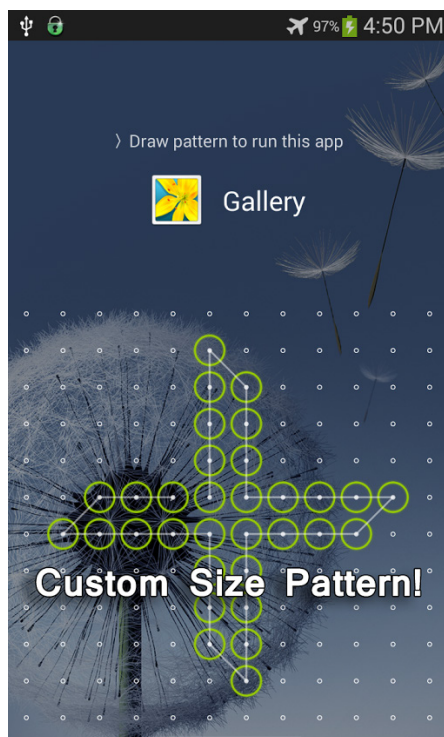

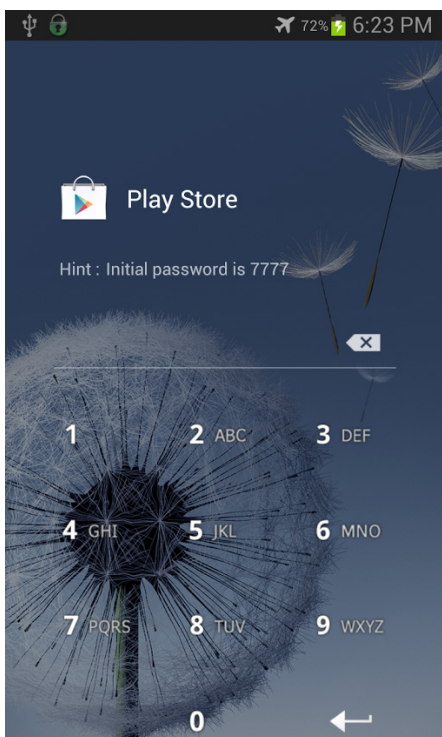

In the unfortunate event that a device falls into the wrong hands, the Smart App Lock provides an added layer of confidence and protection. Working with the advanced technology of Android* tablets powered by responsive Intel Atom processors, the Smart App Lock ensures that users have greater flexibility in controlling their personal data.

Features of Smart App Lock for Intel Atom Processor- based Android* Tablets

- Customizable Access with Password, Pattern or Gesture
- Whitelist Location Settings
- Snaps Photo after Multiple Failed Access Attempts
- Sets up Individual Passcodes for Each App
- Remote SMS Lock
- Locks Data Like Pictures and Videos

Enhanced Security for Android* Tablets with Smart App Lock

Mobile device users know that their personal information is contained on their high-performance Android* tablets and they can trust that sensitive data is secure with the Smart App Lock. By instantly downloading this powerful application, users add control and confidence to their tablet experience.

Smart App Lock is available for immediate download at Google Play:
