**TIME IS RUNNING OUT FOR ORANGE COUNTY RESIDENTS  
THAT WISH TO CAPTURE SOLAR INCENTIVES**  
*Orange County Solar Incentive Program Concludes December 31*

IRVINE, Calif. (November 19, 2014) – Orange County residents have until December 31, 2014, to take advantage of the Orange County Solar Program, a cash-back incentive program administered by local solar firm, Sullivan Solar Power.

Since January, 2014, Orange County residents have received more than \$190,000 in Orange County Solar Program incentives alone. Each participant in the program is also able to receive a Federal tax credit that covers 30% of the project cost. With the Orange County incentives ending this year, and the Federal tax credit program sun setting in 2016, there is a surge for demand in the solar market.

This year more than 900,000-watts of solar power has been committed to be installed throughout the county by Sullivan Solar Power. Residents have been acting quickly to cash in on the incentive program. Representatives from the company argue that there has never been a better time to go solar.

Through the Orange County Solar Program, the average homeowner that goes solar is able to own their solar power system for no money out-of-pocket, replace a current electric bill of \$250 with a much lower fixed payment of \$149, and receive a Federal tax credit to the tune of \$7,000.

“The icing on the cake is that with the Orange County Solar Program cash-back incentive, residents are actually getting paid to go solar,” said Daniel Sullivan, founder and president of Sullivan Solar Power, “The time to go solar is now.”

The program pays property owners 20 cents per watt, up to \$1,000, and is provided in the form of a check after project completion. Limited to 1,350,000-watts, the three-phased program is currently in its final phase of funding and will run through the end of 2014.

-more-

“We created the Orange County Solar Program after the state rebate expired to help transition Orange County to clean, renewable energy,” said Sullivan, “We are offering residents an additional incentive to go solar, regardless if the solar power system is owned or leased, to change the way our region generates electricity.”

Sullivan Solar Power, located in Irvine, provides expertise and personalized services to deliver the highest quality solar power systems. Complementary site evaluations are provided by the company, where certified staff design custom proposals after analyzing a home’s historical energy consumption. Sullivan Solar Power installs the system using state licensed electricians with no subcontractors and monitors the production for the life of the system.
