

## Breeze Multi-Head 6 Media Player

It is an intrinsic truth that human beings are impressed with size, especially when it comes to the visual arts. Size particularly matters when making that first impression. For example, it's not hard to recall the time you witnessed your first IMAX movie.

Breeze Multi-Head brings to any business an affordable way to have large-scale visual impact with the simplicity of a single media player that doubles as a video wall controller. Sporting a 6-head HDMI card that supports 1080P on each digital screen, inspiring video walls are now in the grasp of aspiring businesses that refuse to settle for ordinary.

Breeze Multi-Head eliminates the need for complicated and expensive video wall processing equipment and related video screens that are often cost prohibitive. Instead, Keywest Technology recommends using quality commercial-grade LCD displays with minimal bezel width for the most attractive and reliable installation possible.

Breeze Multi-Head is perfect for bringing larger-than-life images to atriums, foyers, lobbies, main entrances, service counters and reception areas. It also fits perfectly into architectural media that combines integrated design with building esthetics to enhance atmosphere and customer experience.

Breeze Multi-Head makes managing video walls a snap, too. Simply login to the Breeze Editor via the Internet and control your multi-monitor signage from anywhere, anytime. You can forget about time-consuming software updates, costly server maintenance, troublesome downtime, endless upgrades, IT configuration hassles, security concerns and clunky UI software. We engineered the Breeze Digital Signage system to meet all of your needs, from single to multi-screen digital sign networks.

## BRZ-MP+6T player specifications
