

**Founders:** The four founders have very diverse backgrounds, and all met in Armenia for different reasons:

Nigel Sharp  
From: London, UK  
Education: MSc, King's College London  
Primary Role: CEO, Co-Founder, Technologist

Nigel has lived all around the UK before coming to Armenia as part of a short-term volunteer program which placed him at Tumo Center for Creative Technologies. It was during his time working there that he met the remaining Co-Founders. He is experienced in running both large and small scale projects. A Technical Consultant and Engineer, Nigel has strong knowledge in computer hardware and software with added practical experience in humanities computing as well as working with educational technology systems.

Alessandro Mambelli  
From: Florence, Italy  
Education: MSc, King's College London  
Primary Role: Co-Founder, UX and Vision Engineer

Alessandro moved out to London to study Robotics and AI, specialized in Computer Vision at King's College, where he met Nigel. Eventually, Alessandro, inspired by Nigel's suggestion, decided to seek a new kind of adventure in Armenia, where he became the Co-Creator and leader of the largest Robotics community in the country. He has in-depth experience in interactive teaching using Lego Mindstorms, as well as in building large enterprise IT systems.

Lilit Revazian  
From: Moscow, Russia  
Education: MA, Suffolk University  
Primary Role: Co-Founder, Designer and Communication Manager

Repatriated to Armenia when she was 16, and stood out for her creative and artistic talent while working at Tumo Center for Creative Technologies, where she met Nigel. Trained as an Interior designer with multi-faceted interest in drawing, 3D visualization and rendering, Lilit allows the customer to dream their ideas through her sketches and then see those concepts realized into its final application; be it a product, logo, interior or branding unity for our applications and organization.

Gevorg Hovsepyan  
From: Yerevan, Armenia  
Education: BS, Yerevan State University  
Primary Role: Co-Founder, CTO

Gevorg is an engineer and mathematician who's passionate and enthusiastic about his work. He has consistently excelled at designing and building new technical systems, and

excelled at doing so in Tumo, where he caught the attention of Nigel. He is young, talented, confident and driven to continue in the world's technical sphere, while keeping traditions in check at the same time.

The rest of Lionsharp's diverse team includes engineers/developers, business thinkers, and creative minds, from different corners of the world (US, Estonia, Bulgaria, and of course Armenia) with the shared goal to help change the way people interact with technology. Besides work, they are pretty much, literally, a family now: best men and godfathers, husbands and wives. They have lived together in one apartment, working with each other, for each other, and hope to be doing this for many more years in the future.
