

Psiphon Circumvention App Provides Unfiltered and Secure Internet Access

Now Enabled for Intel® Atom™ Processor-based Tablets for Android*

In an effort to keep the web a free-flowing source of information and knowledge, the developers at Psiphon Inc. have created an advanced circumvention system that allows people in countries with restricted Internet to gain access securely. Enabled for Android* tablets powered by Intel® Atom™ Processors, this app provides mobile device users with a way to sidestep censorship filters safely.

Psiphon is a relay-based client application that uses a variety of techniques and protocols to direct the user's Internet traffic through Psiphon's cloud-based service. When connecting to the Internet, traffic that passes between a user's device and a Psiphon proxy is encrypted and authenticated in order to evade censorship. This creates a safe path between the individual and the Internet content they are attempting to access, protecting them from any local attempts to steal cookies or account information when on open WiFi networks.

The Psiphon interface is a simple, articulate system that provides Status, Connectivity, and Log information so users can evaluate their data use and other statistics. It offers Browser and Whole Device modes, so that all applications connecting to the web are tunneled.

Android* Tablets Powered by Intel Atom Processors and Psiphon Technologies Deliver Unrestricted Internet

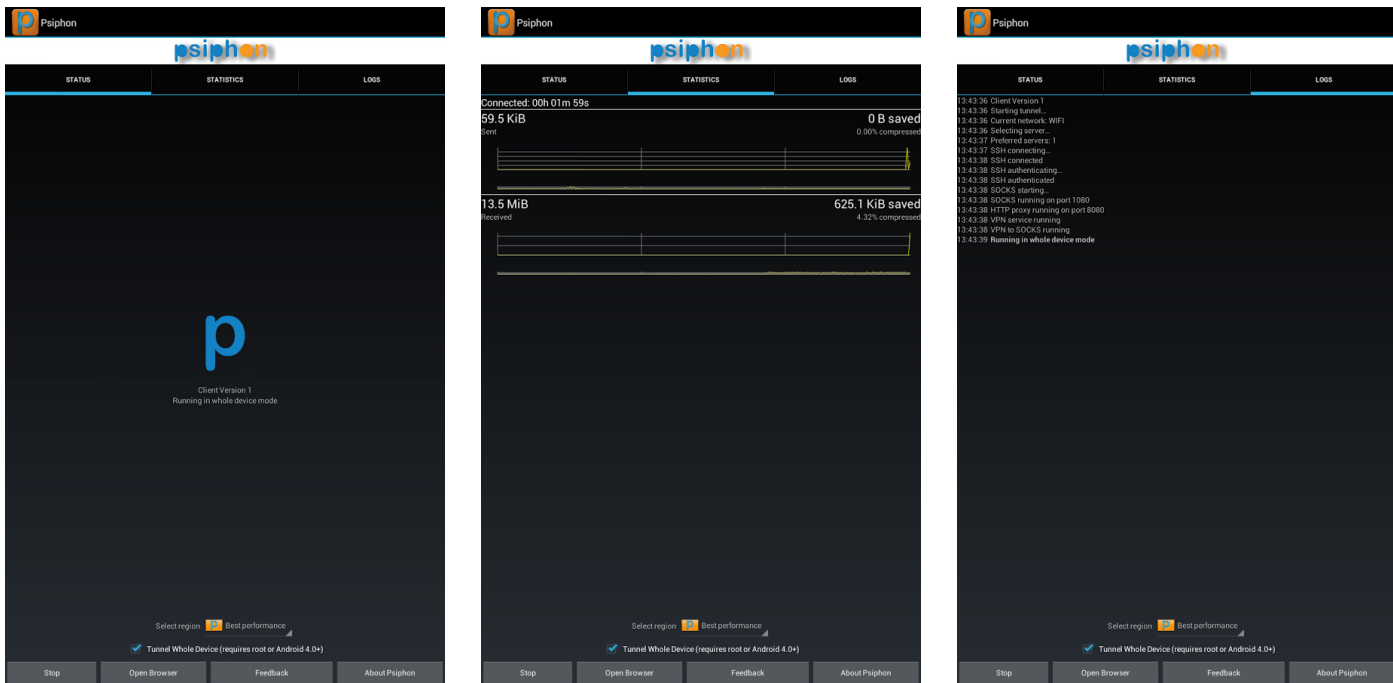

Tablet users can now gain unfettered access to a wealth of information and knowledge via the web. The latest devices from Intel Atom Processor-based tablets for Android* offer strong performance and high-speed connectivity, a perfect match for the advanced circumvention and obfuscation systems that make Psiphon's app a breakthrough technology.

Features of Psiphon on Intel Atom Processor-based Tablets for Android*

- Browser or VPN (whole device) Mode for Tunneling
- In App Status, Connectivity and Log
- Highly resilient to any blocking attempts
- Free, Open Source Software
- Encrypted and Authenticated Connectivity

Keeping the Lines of Communication Open on Tablets

In order to keep the World Wide Web an open path to information, Psiphon Inc. has created an extraordinary application that bypasses censorship and connects people through a high-speed cloud-based network. Working with the latest tablet devices, Psiphon ensures that people everywhere have the same access to online content.

The Psiphon application is available for immediate download at Google Play:
