Badger Meter Showcases Advanced Metering Technology and Smart Water Solutions at DistribuTECH

Company features end-to-end water solutions including AMR/AMI/AMA technology, accurate and reliable meters, and high resolution encoders

MILWAUKEE – [Badger Meter](#), a leading global innovator and manufacturer of flow measurement and control solutions, will feature its advanced metering technology and smart water solutions for water utilities at the annual [DistribuTECH® Conference & Exhibition](#), Feb. 3-5 in San Diego, Calif.

DistribuTECH attendees can visit Badger Meter at Booth #1024 for a demonstration of its smart water technology, including the company's [BEACON® Advanced Metering Analytics \(AMA\)](#) managed solution. BEACON AMA combines the power of the intuitive BEACON AMA hosted software suite with proven ORION® Advanced Metering Infrastructure (AMI) technology using a combination of fixed and cellular endpoints to give utilities greater control, more information and enhanced customer service. The software suite also includes EyeOnWater, a consumer portal and smartphone/tablet app that gives end-users the opportunity to see how their water is actually being used.

Since its launch at last year's DistribuTECH, BEACON AMA has been well received in the market and has already helped utilities across the country monitor and collect real-time decision-making information to better manage their operations.

“One of a city's most important infrastructure components is its water system. As our customers take advantage of information and communications technology to enhance liveability, workability and sustainability, Badger Meter solutions are at work to help them achieve their ‘smart city’ goals related to water usage,” said John Fillinger, director of utility marketing for Badger Meter. “BEACON AMA makes water consumption data available on-demand, allowing utilities and municipalities to proactively communicate with consumers, increase efficiency and better manage their critical resources for future generations to come.”

Along with its industry-leading mobile and fixed network meter reading communications systems, Badger Meter will showcase its full portfolio of end-to-end water solutions: the backbone of the smart water network. This portfolio includes highly accurate and durable [water meters](#) and [high-resolution encoders](#) for a complete range of residential and commercial water choices.
