

Proxios Use Cases

A typical workday never seems to be typical. Whether it's due to interoffice changes, or external forces, sometimes we find ourselves focusing more on how to keep operations running rather than our business. Yet, when it comes to the success of your company, the show must go on smoothly, no matter what.

Proxios recognizes that IT infrastructure often holds companies back from what they do best. We understand that the unexpected happens, and we are proactive and always prepared. We have commercialized IT into a highly reliable, mobile, secure, and cost effective service. You can rely on our stability, even at a time when everything else is feeling rather unstable.

Use Case: Security When Time is of the Essence

Security threats, such as CryptoLocker, are top of mind for all of us, and Proxios provides relief for these concerns by staying on top of the latest threats, and offering some of the most advanced enterprise class security systems available. In the case of CryptoLocker, Proxios takes a “snapshot” of your file system that provides secure, instantaneous recovery. Typical restore processes can take days – time your company doesn't have to waste. Proxios is armed and ready to focus a solution by the type of threat.

Use Case: Business Continuity Business as Usual when the Unexpected Occurs

Oftentimes, the success of a company is based on the job consistently getting done on-time. When a time-sensitive business faces the unexpected – a fire, power outage, flood, or other disaster, is it possible to conduct business as usual? It has to be. Proxios allows you to not miss a beat. With software applications and “virtual” file cabinets safely housed in Proxios' cloud, and accessible from any computer, employees can safely and securely continue their work from home. If a temporary workspace needs to be set up, Proxios enables you to quickly set this up with full access to your email, applications, and data.

Use Case: Onboarding New Offices Efficiently Adapting to Change

When an acquisition is in process, getting an organization up and running can take weeks, if not months. When the deal goes through, it's important for changes to be implemented quickly. Employees and workflow must get off the ground and running fast. Proxios takes the burden off the company and allows staff and satellite offices to be completely up and running in 24 hours – this includes phones, desktops, and whatever is needed to start as soon as possible. A normal organization can take 10 times that long, so this extra time is a strong advantage for smooth business operations.

Use Case: Application Hosting What You Need to Get the Job Done – When You Need It

Your staff needs the right tools to successfully complete projects. Acquiring individual business access to applications can be a long, inconvenient process, and it may also involve purchasing a three-year license. This is not the case with Proxios Application Hosting. Clients can instantly gain access to necessary industry-specific applications, in a cost-effective manner. When the application is no longer needed, access can be ended as easily and quickly as it was started, so that time and money are not wasted. In addition, Proxios' Application Hosting solution includes network management, end point protection, and unified communications.
