Online learning for fast results.

CrunchTime! MainCourse™ is a new free online learning system that makes it quick and easy for users to learn critical application tasks on the CrunchTime back office platform.

Consistent training means consistent results. With MainCourse, training end users to become CrunchTime-proficient becomes an efficient, consistent and measurable process. A company can train all of its restaurant staff to perform a given transaction set in less than 10 minutes. There's no travel required, no dependency on a live instructor, and the lessons are available on-demand at any time. In addition, the training and standards of proficiency are the same for every person, every time, so everyone learns to use the application in a consistent manner.

MainCourse has three integral parts:

- **Online Lessons**- The self-paced online lessons emphasize the major functional areas of the CrunchTime suite. Lessons don't require a live instructor, and are available on-demand to all users.
- **Learning Management System (LMS)**- The LMS is the framework that enables your central administrators to organize all the course content. It is also the portal where your team members register to access the online lessons and track their progress.
- **Central Management Console**- This extension of the LMS provides your central administration team with visibility of the progress your team members are making in completing the curriculum that you have created for them. It provides a seamless platform for you to monitor the CrunchTime certification processes that you have put in place.

Access to MainCourse is simple

Each client company gets its own private environment within the LMS, with a unique URL. When a member of your team visits that URL, they can create an account, get access to online courses, and see all the content that you provide for them.

Getting your company started with MainCourse is a no-brainer

CrunchTime clients don't have to do anything to get their learners on the system except provide them with the unique URL allowing access. Learners create their own accounts, retrieve forgotten passwords via e-mail, and track their own progress. Low supporting overhead for your management team was a primary goal for MainCourse.

If desired, CrunchTime can make a member of the client company's team an Administrator for their environment in the LMS. This functionality allows clients to run powerful reports.
