

Announcement

**RM Hoffman Company is now an
official distributor for
KSS – Advanced Technology of “Miniature”**

Super Small, Ultra High Accuracy

Precision Ball Screws

Precision Ball Screws are fitted with steel balls providing rolling contact between the nut and screw shaft. The rolling contact allows for mechanical efficiency of over 90% and reduces the required torque to less than one-third that of conventional lead screws.

Miniature Actuators

Miniature Actuators make full use of features of miniature ball screws, allowing for super compact actuators. By varying the kind of lead screw, a wide range of products can be customized to meet your needs.

Electric Cylinders

Cylinder-type actuators have a rod (shaft end) that moves back and forth for positioning or lifting. Actuators combine a motor with a ball or lead screw. A wide variety of actuators can be customized using the appropriate drive screw type and screw lead.

Your Partner

Engaging with designers and engineers in creating optimized mechanical motion solutions.
