

TenKod and TestObject Collaborate to Enable Automated Mobile App Testing In The Cloud

Partnership facilitates mobile test automation and continuous integration with cloud-based real mobile devices

HAIFA, BERLIN, February 02, 2015 – [TenKod](#), the leader in automated mobile app testing solutions, partners with the device lab provider [TestObject](#) from Germany. The goal of the collaboration is to provide end-to-end mobile test automation on real mobile devices. Combining the services of TestObject and TenKod will allow users to perform robust test execution on real iOS and Android devices remotely in the cloud.

With TenKod's product, [EZ TestApp](#), users can create highly robust automated tests for iOS-, Android- and mobile Web-Apps. TestObject provides customers with cloud based mobile devices for both manual and automated testing. The partnership allows clients to run EZ TestApp projects on the TestObject platform.

The complementary nature of the two services led to the cooperation as TestObject CEO Hannes Lenke says. "TenKod has a truly innovative approach that absolutely convinced us. The robustness of the tests as well as the ease of use stands for itself!". He goes on, "We see an increasing demand for a solid automation solution and with TenKod our customers can benefit from an out-of-the-box service at a fraction of the costs compared to other tools."

Also TenKod CEO Asaf Saar underlines the mutual benefits of the cooperation: "With TestObject, we will advance EZ TestApp's unique offering into the cloud, elevating both companies." Saar adds, "With TestObject's leading position we now provide mobile app testing and continuous integration capabilities on real mobile devices in the cloud. This will help our customers to increase test coverage and reduce their costs for hardware infrastructure significantly."

The partnership of TenKod and TestObject represents a mutual goal between the two companies. Both managers have agreed that working together will bring their companies closer to achieving publicly available mobile test automation services that are highly advanced yet very simple to use.

###

About TenKod Ltd.:

Founded in 2013, the goal of TenKod is to simplify the complexities found in the mobile application testing processes, specifically in the continuous integration development and testing landscapes of the mobile applications arena.

TenKod is the top vendor in mobile test automation solutions and boasts innovative technology, an enviable development plan, creative minds and strong leadership. It's flagship product EZ TestApp has made a name for itself as the ultimate solution for mobile applications testing.

About TestObject GmbH:

Everyone hates bugs! That's why TestObject - an in the cloud all-you-need testing tool - was founded in 2012. App quality has a major impact on your apps' success but massive fragmentation of operating systems and mobile devices makes it hard for developers to test and guarantee the functionality of apps under different conditions. This is where TestObject comes to play. The Berlin-based company provides a cloud platform with numerous real Android and iOS devices, accessible directly from your browser. Developers can upload their apps onto devices and see if and how they work. Along with the devices TestObject provides several testing tools to check the app functionality from all angles. Test more, worry less!
