iScan Online Announces Larry Lyons As Vice President Of World Wide Sales

NEW SALES LEADER HIRED TO DRIVE ENTERPRISE SALES EFFORTS

PLANO, TX – 2/5/15 -- iScan Online, Inc. today announced it has expanded its leadership team with the addition of veteran sales executive Larry Lyons as its new Vice President of World Wide Sales.

In this role, Lyons will oversee all sales functions and be responsible for expanding its enterprise sales team and partner programs. iScan Online has experienced significant traction since introducing its Data Breach Prevention solution late last year.

 "I am thrilled to be joining the iScan Online team," said Lyons. "The opportunity to work with an innovative organization such as iScan Online was a big factor in joining the company. I am honored to be joining a team that is truly changing the way organizations defend themselves against data breaches, that is focused on their customers and is dedicated to delivering award-winning solutions."

With over 25 years in Enterprise Software, Security and Networking sales, Lyons' background includes sales leadership roles with organizations including Cisco, Polycom and most recently Aruba Networks.

"Larry's extensive experience in growing sales organizations at all stages makes him a perfect hire for us. The iScan Online team is proud to bring an executive of Larry's caliber on board," said CEO Carl Banzhof. "With the addition of Larry, we continue to build out our strong leadership team and he will be instrumental in our ability to scale the sales operations of iScan Online well into the future."

iScan Online is dramatically changing the way mid market and enterprise organizations identify unprotected sensitive data, security threats that can be used to gain access to the data and quantify the liability cost associated with a potential data breach before it occurs.

Through its patented, scalable cloud delivery model and its simplified deployment practices, iScan Online customers achieve visibility into their data-breach risk exposure in minutes, not weeks or months. iScan Online provides customers with analytics and enterprise reporting that details their total estimated liability in dollars as well as prioritizes remediation efforts to prevent a data breach before it occurs.

About iScan Online

iScan Online, Inc. is a provider of data breach prevention solutions, enabling organizations to discover unprotected sensitive data, detect their security threats and report on the financial impact of a breach before it occurs. iScan Online was named an Industry Innovator by SC Magazine in 2013 and 2014 and the Top 20 Most Promising Enterprise Security Companies by CIOReview Magazine in April 2014.
