

## Make Better Business Decisions by Uncovering Security Threats Known and Unknown

### **OneStone<sup>™</sup> Information Assurance Portal**

When it comes to safeguarding your vital information and your enterprise, what you know is important. But knowing what you don't know is crucial. Protect your organization from external and internal threats known and unknown with the *OneStone<sup>™</sup>* Information Assurance Portal.

Developed by Securis, a leader in premium information assurance, *OneStone* is a cost-effective cybersecurity solution that manages and monitors threats from our Security Operations Center. We provide constant and reliable Threat and Vulnerability Management, Business Risk Assessments, and Asset Classification and Tracking through a reliable 24x7 service that's easy to deploy and provides immediate benefits.

That way you can make more effective risk-based business decisions at every level.

### **The Benefits of a Managed Security Service**

- **Cost Effective Solution**—Compared to the costs associated with maintaining your own 24x7 in-house IT security department or program (staffing, training, maintenance, and infrastructure), OneStone is just a portion of the price.
- **Improves Threat Protection**—Provides 24x7 visibility, and it facilitates effective incident response to known and unknown external and internal threats, as well as unauthorized intrusions.
- **Enhances Security Posture**—Improves your organization's overall security posture so your senior leadership can make more effective and faster business decisions.
- **Facilitates Compliance**—Provides enhanced information security controls, online real-time information, and comprehensive reporting to ensure compliance with various industry regulations.
- **Improves Operational Efficiency**—Helps you increase performance by managing your security environment with real-time views of the efficiencies/inefficiencies of your systems.
- **Technology Agnostic Integration**—You can integrate various data sources, regardless of its type or manufacturer. This means little to no cost to replace existing IT assets, minimal set up costs, and a significant degree of flexibility in how the technology will be applied.
- **Provides Proactive Management**—Identifies and remediates technical vulnerabilities at all levels before they impact your business.

AN ABOVE SECURITY® COMPANY

## Improve Decision Making at all Levels

- **Executives** get a top-down view of your organization's security risk exposure and how it affects your business objectives and critical information assets.
- **IT Security Managers** receive an operational view of the status of security incidents and current security posture so you can plan security operations and execute day-to-day activities efficiently.
- **Security Analysts and IT Practitioners** have access to an advanced tool-set (including state-of-the-art correlation algorithms, security information event management, and workflow applications) for identifying and correlating threat events, prioritizing and responding to incidents, managing vulnerabilities, and supporting security operations.

## Advanced Security Management Services

Utilizing Seccuris's advanced security and event management technology, *OneStone* offers the following cost-effective services:

- **Threat Management**—24x7 monitoring and management of internal and external threats to your network environment. Once a threat event, data loss, or malicious activity is identified and validated, *OneStone* Threat Management service sends you an alert and escalates the potential threat so corrective action can be taken. Backed by our expert analysts, our tailored event correlation, and integrated, automated incident-handling workflow adapt to any organization's threat management requirements and processes.
- **Vulnerability Management**—Provides on-demand scanning and assessment of the technical and environmental vulnerabilities in your computing infrastructure. Detailed dashboard screens and available reports identify, quantify, and prioritize the information security strengths and weaknesses of your computing environment, and provide a plan-of-action to reduce the risk of serious consequences.
- **Asset Classification and Tracking**—Tightly couples organizational assets with threat and vulnerability data, enabling business risk to be more effectively measured. Information assets are identified and classified based on business criticality, function, and importance, allowing calculation of related threats and vulnerabilities to present a complete risk picture. Customers can generate reports dynamically for compliance, performance, and assurance issues via the *OneStone* interface. Knowing the value of your threatened assets can help prioritize alerts and remediation activities.
- **Log Management**—Extends the threat management capabilities by providing vital referential data via access to historical log information collected and processed by *OneStone*.

Since 1999, Seccuris has been helping clients with business-driven cybersecurity solutions through consulting, risk management, and managed security services.
