Discover How To Leverage Data For Better Decision Making  
Flexibility & Universal Access Between Many Platforms And Sites  
Ease Of Use, Better Data Protection And Access

## Moving Your Data When and Where You Need it the Most™

### EDpCloud™

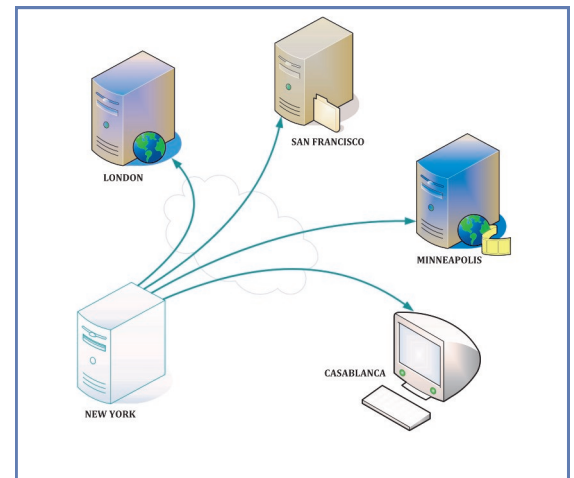

EnduraData EDpCloud is a robust cross-platform file replication solution that automates encrypted data transfer between geographic sites, systems and business processes. The solution integrates with existing workflows, runs on existing hardware, reduces costs and increases operational efficiency.

Cross Platform Data Aggregation  
And Backup Consolidation

### EnduraData Professional Services

Professional Services - a trusted and proven partner of business and government, creating software and implementations across multiple applications and systems, serving the creators and users of data. Secure data in its transit to single and multiple locations, driving organizational innovation and advantage with timely and comprehensive data for decision making.

File Transfer and Data Distribution  
Between Heterogeneous Systems & Sites.

Discover How To Leverage Data For Better Decision Making  
Flexibility & Universal Access Between Many Platforms And Sites  
Ease Of Use, Better Data Protection And Access

## Leadership

- Increase and capture the value of investments in people, data, information and infrastructure
- Save costs, improve risk management and propel growth
- Ensure critical data protection, data integrity, data migration, replication, synchronization and backup
- Gain competitive advantage through timely, comprehensive data, information and intelligence, delivered to your organization's teams anytime, anywhere
- Create a cohesive data environment where headquarters and remote sites have secure access to data and information.

## IT Management

- Drive innovation, creativity and greater visibility for IT by providing immediate access to critical data
- Create a cohesive workflow and systems environment by integrating data operations and data synchronization
- Real-time visibility and access to the state of your data migration and systems
- Since EDpCloud™ is easy to use with your current systems and platforms - you receive greater efficiency, minimal cost impacts and improved ROI
- Meet SLA agreements.

## Systems, Networks and Data Management

- Move data securely and efficiently between Windows®, AIX®, Mac®, Linux®, Solaris® and Unix® platforms
- Instantaneous and automatic email alerts on system faults and applications
- EDpCloud aggregates and distributes data, preserves all evidence - logs, audio, video - unstructured data
- Data migration and file transfer to and from anywhere
- Configure and monitor from anywhere
- Go back in time to retrieve previous file versions.

Discover How To Leverage Data For Better Decision Making  
Flexibility & Universal Access Between Many Platforms And Sites  
Ease Of Use, Better Data Protection And Access

## Data, Information and Knowledge

- EDpCloud™ improves risk management and saves costs of data transfer, of data migration; automates replication: synchronization, storage and back up
- Data becomes widely and securely available to headquarters, teams and individuals in many systems and many remote locations
- Big data becomes actionable business intelligence to meet the critical operational challenges of today's enterprises
- EDpCloud delivers the critical value of Big Data across different platforms and systems - giving teams and individuals the opportunity to develop better analytics, to understand customers and the competitive landscape.

## Systems

- EDpCloud runs on existing infrastructure, on Windows®, AIX®, Mac®, Linux®, Solaris® and Unix®
- Dynamic reporting capabilities provide extensive logs and statistics with an immediate early warning system for monitoring system failures and disruptions
- Reduce costs of data movement, of data migration between systems, of management and of bandwidth while protecting against data leaks and loss.

## Individuals and Teams

- Timely shared data and information drives creativity and collaboration, providing teams and individuals with true business insights
- EDpCloud creates a cohesive, level playing field for teams and individuals - at headquarters and in multiple remote locations - data and information delivered automatically and securely.

## Domain Leadership

EnduraData brings over 25 years of experience creating data management solutions, helping organizations leverage data and information systems for decision making.

EnduraData provides an enterprise solution to leverage data and information for organizational success, by ensuring automatic and secure data movement, data migration between systems, platforms and geographic sites. The results are saved costs, improved workflow, increased operational efficiencies and profits.

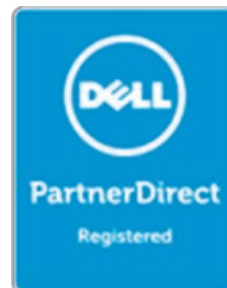

## Professional Services

- EnduraData Professional Services develops and deploys remarkable high performance software applications and systems
- Easy integration with existing workflow and operations for secure data transfer, reporting and management
- Automates business processes and improves analysis to leverage data for improved decision making
- Automates and distributes processing and reporting
- Supports Windows®, AIX®, Mac®, Linux®, Solaris® and Unix®

## Work & Partnerships

EnduraData engineers created software solutions and innovations that power some of the most critical applications in the marketplace today.

Our leadership and core teams have worked in Data Management and Storage for Government, Financial Services, Banking, Healthcare, Telecom and Educational organizations.
