

# HIPAA security is mandatory.

Will you be ready?

## Ensure compliance and avoid fines for less than 1% of your annual incentive payments

Many organizations lack the expertise and training to fully understand their requirements and data security needs. HHS/OCR had gained the authority and resources to enforce HIPAA on a national level, particularly for information breaches, which can result in public admission and significant fines.

HIPAA One was developed based on many years of information systems and healthcare IT security experience. It provides a simple and affordable solution that ensures a successful Risk Management Program to satisfy your OCR HIPAA Security Rule requirements.

Whether you are in healthcare or not, HIPAA One provides a simple, yet robust, HIPAA security self-assessment solution all at an affordable cost.

“Violations over the past year will pale in comparison to the next 12 months...”

– OCR regional counsel for the Chicago area.

## HIPAA Self-Assessments made easy!
