**PRESS RELEASE
FOR IMMEDIATE RELEASE**

**VIR-SEC® Announces “Securing Your Web Portal”
And Pricing of SecureAcess™**

CLEARWATER, FL — Vir-Sec, Inc., a cybersecurity company based out of Clearwater, FL, is announcing its “Securing Your Web Portal” program, a program designed to deploy Vir-Sec’s SecureAcess™ technology to secure a business’s online web portals, email, chat functions, and document & data transfers.

The program is accompanied by the announcement of the pricing for Vir-Sec’s SecureAcess™ technology, an encrypted and secure USB token that utilizes a browser-less Internet application instead of a web-browser to connect users to the Internet and web portals.

Web-browsers are the most common point of attack in cyber breaches, and SecureAcess™ eliminates the threat posed by stored data and web portals on a public facing website by removing access on the public facing web, and allowing only known users to access the private and secure server using their SecureAcess tokens.

Vir-Sec is also offering SecureCommuniqé™, an application that allows users to email, chat, and send documents & data, free through the Alpha and Beta phase of the application and then at a discount when the application is fully complete. SecureCommuniqé™ allows a business to build an entire secure network by simply distributing SecureAcess™ tokens to their employees.

SecureAcess™ is the only cyber security solution available that completely secures a business or organization from outside bad actors and malicious activity. Browsers are unable to access or even find a SecureAcess™ server and application, therefore only users with a specific SecureAcess™ token can access the intended network.

An overview of the “Securing Your Web Portal” and SecureAcess™ pricing is attached as a PDF to the original press release, and available at vir-sec.com. Orders and inquiries should be directed to sales@vir-sec.com.
