

Radio FM by RadioFM

Now Enabled for Intel® Atom™ Processor-based Tablets for Android*

All cultures and continents generate their own unique and valuable content and with more broadcasts migrating to the Internet, there is even more to discover. The Radio FM application is now enabled for Android* tablets powered by Intel® Atom™ Processors, so whether its song or news, comedy or talk shows that captivate listeners' attention, the audience is rapidly expanding.

Radio FM allows users to access any web-based radio station, either through its extensive search capability or through its directory of 20,000 stations worldwide. Users can search by country, call number and genre, seeking out their favorite programming and discovering whole new cultural resources.

This powerful and simple interface makes it easy to explore, organize and share new stations with friends. With multiple languages like English, Italian, Spanish, French, German, Portuguese and Indonesian, this app presents the world's culture to the world's listeners.

A Captive Listening Audience on the Latest Mobile Devices

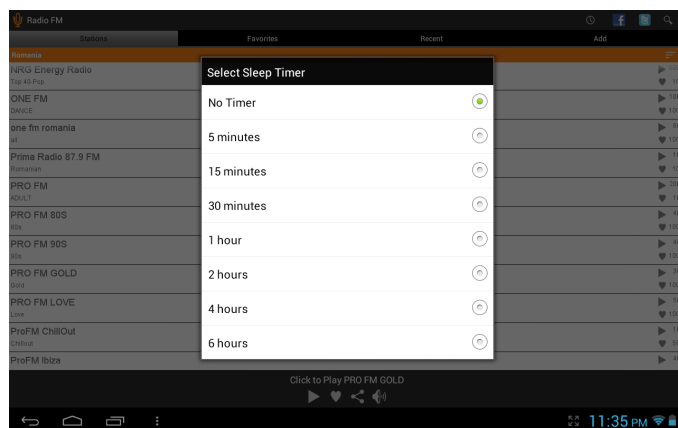

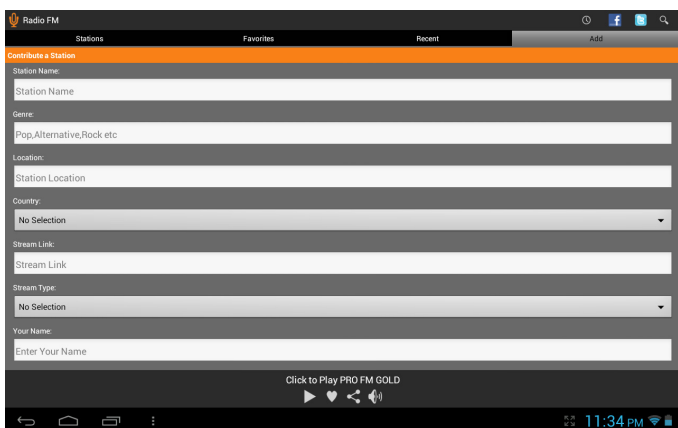

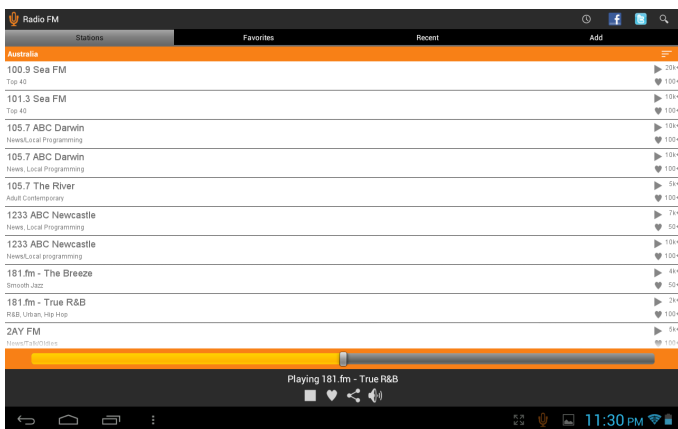

Now, users can tune in to their favorite audio from any location with the Radio FM app. The crisp, high-quality sound and lightweight portability of Android* tablets powered by Intel Atom Processors deliver a treasure trove of diverse content anywhere there is an Internet connection.

Features of Radio FM for Intel Atom Processor-based Tablets for Android*

- Directory of 20,000 Internet-based Stations
