ONLINE INVENTORY MANAGEMENT & ASSET TRACKING SYSTEMS

BarCloud

Track Stock Inventory & Assets | In the Cloud or Locally-Hosted | Fast, Intuitive, Configurable | Barcode-Based

BarCloud Inventory and Asset Systems

Whether you are tracking IT equipment, medical supplies, tools, chemicals or other items, BarCloud gives you complete control of your stock inventory and assets. Automate inventory and asset management transactions using barcode labels (that you design) or RFID technology. Use the BarCloud mobile app to access your data on any Android or iOS device—anywhere, anytime—in a secure environment. The system improves the productivity of your operations and reduces labor costs in order to generate the highest ROI for your organization.

Why ASAP Systems?

ASAP Systems, a well-established support organization (since 1985), has developed BarCloud into a mature solution. Based in the Silicon Valley (San Jose, California), ASAP Systems operates at the forefront of technological innovation to meet the real world demands of its customers. The company has unmatched expertise in providing inventory and asset tracking solutions for almost every industry.

The online system helps your organization or business:

*   **Be more efficient:** Using barcode or RFID technology, quickly and easily scan and enter your inventory and data.

*   **Be more accurate:** Minimize the risk of mistyping data or entering incorrect information.

*   **Improve visibility:** Share inventory and asset reports, analytics and updates with employees, managers and vendors

User Configurable

Configurability is built–in, which means no custom software fees. Rename all data fields and enable user–defined fields. Turn a function (i.e. Purchase Order) on or off if you don't use it. Easily adjust the viewing and functional preferences for each user, such as the user interface, data columns and reports. Also, design barcode labels the way you need.

Advanced Features

Configure BarCloud to the specific needs of your business with our advanced features:

*   Advanced Inventory
*   Check Out – Check In
*   Excel Data Import
*   300+ Integration Options
*   UPC Lookup

*   Data Backup*
