ProShip, Inc. Named FedEx® Compatible Diamond Solution

ProShip is recognized as a top-tier FedEx provider; acknowledged for outstanding software performance and customer service two years in a row

Brookfield, Wis., April 15, 2015 - ProShip, Inc., a leading provider of enterprise-wide, multi-carrier shipping software and IT solutions, today announced it has been named a FedEx Compatible Diamond Solution, recognizing the company's superior performance in shipping and delivery methods and procedures. This is the second consecutive year that FedEx has named ProShip a Diamond Solution provider, the highest level in the FedEx shipping and delivery program.

"This recognition from FedEx addresses the fundamental framework of ProShip Software and our goal to provide the most compliant shipping software on the market," said John Berg, Vice President of ProShip. "We are especially proud to be given this award two years in a row. This achievement highlights the value we bring to our client base and our ongoing commitment to customer service."

Berg said ProShip is continually involved in beta and early adopter testing of new FedEx services and is consistently one of the first companies to certify new FedEx services and requirements. "As a result of our close working relationship with FedEx, our customers can begin using new FedEx services as soon as they are available," said Berg.

FedEx first introduced its Compatible Solution program in 2014 to determine a company's shipping and delivery capabilities. Selection is based on a variety of criteria – customer service, year-over-year growth in volume, revenues and customer installations, percentage of customer renewals on the newest software versions and maintaining annual software certifications. Last year, FedEx selected ProShip as one of four companies to receive Diamond Solution status. As one of six Diamond Solutions recipients in 2015, ProShip is once again recognized for having the most up-to-date software and maintaining a high level of customer satisfaction.
