Stone Removal

*Return is based on
actual recovery, not
estimate*

*Completely
cyanide-free process
is safer for your
employees*

*Free, no-obligation
third-party appraisal
on stone lots*

Over a decade ago, we developed a Stone Removal process that set the standard in the industry. Since then, we have introduced proprietary processes that continue to be unmatched in the industry.

- Our process is **completely cyanide-free** and delivers clean, residue-free stones that are safe for your employees to handle
- Pease & Curren return **payment is based on actual recovery**, not assay or estimate
- All precious metals dissolved in process solutions are also recovered and returned

BASIC STONE REMOVAL

Stones are removed from gold, silver and platinum settings with a cyanide-free process. The stones are filtered out of the solutions, cleaned and hand-sorted into clear, color and miscellaneous categories. The stones are packaged and returned to the customer.

PREMIUM SERVICES AVAILABLE

Frosting - A process applied to clear stones to help identify clear stones from cubic zirconias (CZs). The process etches the CZs, resulting in a cloudy appearance that allows them to be easily identified.

Separating - Clear stones can be separated from frosted CZs.

Sorting - Stones can be sorted in up to 6 sizes.
