Turn Information Risks Into Business Opportunities

Information Assurance Consulting Services

As the number and level of potential attacks, breaches and dangers to your vital information increase, it's imperative to have an effective security program in place. Seccuris can help you by tailoring a program to safeguard not only your information, but also your ability to successfully operate your business.

We are the unique alternative to other consulting firms because our team of professionals assesses your entire enterprise, not just your technology. Knowing what you don't know is critical. So we help you uncover all external and internal threats that are known, unknown, existing and emerging.

Then we work with you to determine exactly what you need. Whether it's Enterprise Security Architecture Development, Enterprise Assessment and Design, IT Risk Management and Compliance, or Security Response Services.

That way you can make effective risk-based decisions at every level.

The Importance of Information Assurance

Information Assurance is about taking an integrated approach to enterprise risk and aligning organizational business objectives with information security objectives.

Seccuris can help you ensure your security efforts contribute to the success of your organization through an Integrated Assurance approach, including:

- *Best Practices*—We provide you with a high level of service quality using industry-recognized standards, frameworks, controls, and regulations.
- *Applied Experience*—We help translate your business objectives into an appropriate security program by applying our practical knowledge, experience and expertise.
- *Architecture Expertise*—Using our proven approach to Enterprise Security Architecture, Seccuris will develop a roadmap to define key Information Security priorities, allowing you to focus on your business while reducing your risks.
- *Experience Working with Information Security Practitioners*—We work closely with all levels of security professionals to help them understand the information security issues they face, and we provide the tools and training to recognize and eliminate risk efficiently.
- *Managed Services*—Outsourcing components of your security program, such as Enterprise Threat Monitoring (including Wireless and Mobile), ongoing Vulnerability Management, and Device Management, allows you to focus on your business while we focus on helping to manage your risks and exposure.
