

## What people are saying about Twiddler 3

### ***Seriously good***

“Sometimes there is that one product that is so different, yet works so well, that it creates a class of its own. Prepare for one-handed typing.”

“The Twiddler 3 is a serious – and seriously good – mobile input device.”

- [Technologytell.com](http://Technologytell.com)

### ***Second to none***

“As a keyboard replacement the Twiddler 3 works, and with practice it provides comparable speeds from a single hand. For those who need a free hand, or want to walk and type, the device is second to none”

“On mobile devices, the Bluetooth works very well indeed, popping up a mouse pointer on Android handsets and tablets, and connecting seamlessly on everything we tried. The Twiddler III makes a killer device for presentations, navigating slides shows and entering URLs, where the speed of text entry is less critical.”

### ***Perfect keyboard for people with mobility issues***

“I can see this being incredibly useful for people with mobility issues. It takes the complete input devices of a computer, and shrinks them to something much more manageable. It’s perfect for those suffering from debilitating muscular degenerative issues, like muscular dystrophy, or people who have experienced a stroke.”

### ***Stand out design***

“The design of the Twiddler stands out. Though requiring remapping of my brain and muscle memory in the short-term, I could see myself enjoying the convenience of having a free hand once I learned the system.”
