City Sound
... for a quiet life

Established 1968

Introduction

City Sound has been offering London's community a boutique service since **1968**. Recognised for our **superior** level of workmanship and impeccable after sales service, we are still very much a family run company that has been passed down through the generations. Very passionate about who we are, what we do and where we have come from, you can be assured of the highest level of expertise and service from us all.

We welcome projects from both **residential** clients and the **commercial** sector. Our core clientele are those seeking a high-end service with first class products.

All our windows are uniquely made to suit the client's personal requirements and specifications.

Application

City Sound's unique window system can be considered for use in Conservation areas or listed buildings due to its unobtrusive appearance.

Sound reduction:

Secondary glazing is, by far, the most effective way of excluding environmental noise, making your office or home noticeably more serene. Our glazing can also be used to retain noise within buildings (pubs, theatres etc.).

Thermal / Draught Insulation:

A further application of secondary glazing is thermal insulation and complete draught exclusion. Old, single glazed

windows are notorious at letting all the heat escape, resulting in unpleasant cold spots and very expensive heating bills in the long English winters.

Security:

Fitted with laminate glass, secondary glazing can be installed as an added security measure.

Secondary glazing requires the installation of a new, fully functional and independent secondary window that will be fitted on the inside of a property (usually within the window surround that house the primary, external windows).

Styles

With a number of styles to choose from, it is always important to choose the right one that suits the external windows.

Our unique design mirrors the structure of your existing primary windows so that the secondary glazing is hardly visible once installed.

If you are living in a period home, this is even more crucial as you do not want to detract attention away from the charm the windows lends to the property.

Sash windows:

By far the most popular style of

secondary glazing. Our sash windows are counter balanced for light and easy operation.

*Our unique sash system, the **EASY CLEAN** sash, is exclusive to City Sound. This system was redeveloped in-house to eradicate the cleaning issue that other traditional secondary sash windows pose (there will always be a 9" band on the site line of the secondary windows that cannot be reached for cleaning. Over time, this will become increasingly unsightly, drawing unnecessary attention to the secondary glazing).*

*The **EASY CLEAN** sash system allows both top and bottom sliding panels to contra-slide past each other in opposite directions, making it possible to reach all areas of the glass surface when cleaning. The **EASY CLEAN** sash is a slim profile system, making sure the windows are as unobtrusive as possible.*

Horizontal Sliders:

The most versatile style in our range. These can be manufactured with 2, 3 or 4 sliding panels and are a perfect match for Crittal Windows. All our horizontal sliding windows run on stainless steel

rollers, that are durable and allow for easy operation.

Casement (Hinge) units:

Allowing full access to primary windows, this style of secondary glazing can also be applied to patio or french doors.

Lift out windows:

A very simple, yet discreet style. This type of window has a removable panel which sits independently within the master frame. Perfect for those windows that are not used often, but still need to be cleaned.

Our unique secondary glazed systems can be used in the following applications:

- ✓ **Sound Reduction**
- ✓ **Thermal Insulation**
- ✓ **Draught Exclusion**
- ✓ **Security**

Commercial Projects

Dealing with commercial clients and projects needs special care and know how.

Weather you're an architect looking for the right company and product to specify in your clients plans or drawings, a contractor tendering for a project or if you are already on site, City Sound has the experience and background to help steer you and your project into the right direction. We understand the industry and all its pressures, particularly how essential timing and completion dates can be.

Being a medium size company, we have the flexibility to adjust our ways to suit each project and will always go the extra mile for each and every client.

Past and present commercial projects have been highly successful and we have built up a healthy following of architects and contractors that have become regular clients, always specifying not only our products, but us as a company to fulfil their projects needs, knowing that they have and will always deal with a company that has their best interests at heart and will deliver a quality product and service each time.

From initial introduction to timely completion of a project, we are able to walk you through each stage. You will have dedicated surveyors and staff dealing with your specific project from start to finish – this way making sure there is good communication, all parties work in synergy and the whole process runs smoothly.

We have a healthy work ethic amongst us and have a "get stuck in and get it done" attitude. Our engineers are very well trained, finalising jobs on time and we pride ourselves in minimal snagging at the end of a project.
