Fairview Health Services Selects PDS to Enhance IT Asset Management Practices

Technology services company to provide products and services to modernize end user environment

MILWAUKEE – June 18, 2015 — Paragon Development Systems (PDS), a leading information technology solutions and services company, announced today that it has been named vendor of choice for Fairview Health Services to exclusively provide equipment and professional services to help upgrade their end user IT environment.

Under the terms of this agreement, PDS will provide services for all Fairview locations, including device installation, retrieval, storage and disposition, along with strategic guidance to identify and implement process improvements. This relationship will further enhance customer satisfaction and asset management processes while enabling Fairview to devote internal resources to strategic, value-added IT projects.

“PDS is excited to be partnering with Fairview to provide technology life cycle management services,” said Richard King, Executive Vice President at PDS. “With our expertise and deep understanding of healthcare systems and their unique requirements, PDS is uniquely qualified to achieve significant outcomes for our healthcare clients such as Fairview.”

PDS provides life cycle management solutions and services to organizations in the healthcare, government/education and corporate markets. The partnership with Fairview will focus on creating an asset management program that aligns with forecasted product needs, establishing and tracking product life cycles to ensure continued uptime, and coordinating secure disposition and recycling of retired assets. In addition, PDS will provide extended managed services that will drive significant cost reduction and process improvements for Fairview.

“With over 20,000 employees, Fairview has a uniquely diverse and complex technology ecosystem,” said Kerry Marti, Director of Life Cycle Management Services at PDS. “Our partnership with Fairview will drive business value through the creation of a more manageable computing infrastructure, which will ultimately improve workflows and enable better patient care.”
