CDS Opens UK Data Center to Expand International eDiscovery Capabilities Secure Facility and Technology Applications Support EU eDisclosure Operations & Privacy Requirements

LONDON - Complete Discovery Source (CDS), a leading eDiscovery company, announced today that its high-capacity data center in downtown London is now fully operational. The facility features leading edge technology and security to serve CDS' US- and EU-based clients with international case requirements.

The opening of the London data center is the latest addition to CDS' international eDiscovery capabilities. The facility addresses the need to process and host sensitive data in the European Union in strict compliance with the European Union's complex privacy and data protection laws. Those restrictions on the movement of data, combined with an increase in global investigations and litigation, require companies to ensure that the discovery collection, processing, and any form of data handling are performed and kept within the EU.

The CDS UK data center adds scale and flexibility in managing regional cases across the EU. In matters where cross-border eDiscovery must take place and data must be handled on-premise with an additional layer of security, CDS continues to offer Digital Customs, a proprietary, self-contained mobile data center that can be deployed in high-security countries and within corporate facilities around the globe. In addition to data management capabilities, the CDS forensics team has extensive experience and the ability to collect and analyze data in the EU and across the globe.

Garrett Bendel, Chief Operating Officer at CDS, remarked, "The opening of the EU data center builds on a solid track record of successful cross-border eDiscovery through our overseas partnerships and our portable technology. The facility allows us to make our compliant eDiscovery services even more scalable, secure, and controlled."

CDS has a proven reputation for managing complex Big Data discovery. The CDS UK Data Center has capacity for large volumes of active storage and can process infinitely scalable amounts of throughput via its "big pipe" multi-node structure. Utilizing the same top-tier global hosting infrastructure as CDS data centers in the US, the new facility enhances CDS' international capabilities for global forensics, processing, hosting, and analysis.

About Complete Discovery Source - eDiscovery

Complete Discovery Source (CDS) is a leading eDiscovery company, providing litigation technology and hosting, advisory services, and managed services to support complex discovery matters. CDS is the first choice of the Am Law 100 and Fortune 500 and is recognized as Best in End-to-End eDiscovery by the National Law Journal and New York Law Journal. With a team of seasoned legal experts and technicians, CDS uses advanced, tested, and defensible services and software to support all stages and types of eDiscovery.
