

About Keezel Company

Keezel is an Amsterdam based company bringing the keezel device and service to market. Keezel helps everyone enjoy their online freedom. Online freedom means protecting your privacy and security and at the same time enjoying a free and open internet.

The keezel device is a portable personal WiFi solution powered by VPN technology. It uses other WiFi for its internet connection and provides a separate secure WiFi hotspot for the owner. Keezel is a Dutch investor backed company, based in Amsterdam. For more information please visit www.keezel.co.

Company Vision

We all use WiFi everywhere.

We share more than we know.

We get less than we want.

Let's fix that.

You share more than you know

Many people know that Virtual Private Network technology (VPN) has some wonderful uses. Big companies have been relying on it for security reasons for years. How come we don't use it for our private lives as well?

The internet has changed from 'some websites with information in the 1990s' to an integral part of our personal lives, with family photos, letters to our loved ones, our shopping behaviour and financial details.

Keezel aims to bring VPN to everyone who is regularly online. You mother should enjoy the benefits just as much as the big companies.

Privacy and security are at risk and deserve widespread action today. Keezel has created a way to make VPN accessible for everyone on every WiFi device.

It's time for everyone online to step up their game on online privacy and security.

You get less than you want

Free speech is a precious thing. The Arab spring has shown the power of online social communities on Facebook and Twitter. Many regimes are blocking their people from websites where they can openly express their concerns for the direction their government is headed.

At the same time every individual in the world is being censored to some degree from online information. A taxpayer in The Netherlands whose taxes are being spend on public television is not able to enjoy these programs, when travelling to another European Union member. Even though the EU Single Market seeks to guarantee the free movement of goods, capital, services, and people – the "four freedoms".

VPN is the basis for corporate protection and freedom and makes a Dutch employee of an international consultancy company for example connect to their Spanish servers, being able to use the internet as a Spanish employee.

Keezel aims to help as many people as possible to enjoy their online freedom.
