

# How To Setup Your Website(s) In The Cloud

A Presentation By [NameHero.com](http://NameHero.com)

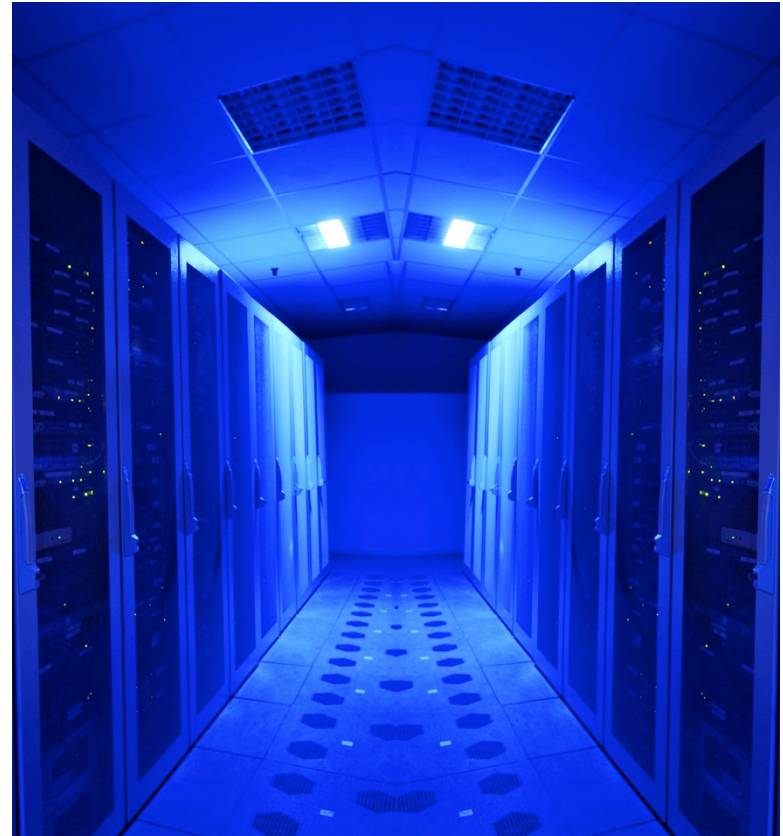

# Introduction To Cloud Hosting

- + What Is Cloud Web Hosting
- + How The Cloud Benefits Your Business
- + How To Setup Your Cloud Hosting Account
- + How To Manage Your Website
- + How To Add Additional Websites

# What Is Cloud Web Hosting?

- + Cloud Web Hosting is based on Cloud computing technology that allows an unlimited number of physical machines to act as one system.
- + Where other web hosting solutions such as Shared, VPS, or Dedicated depend on one physical machine only, cloud hosting is guaranteed by many servers.

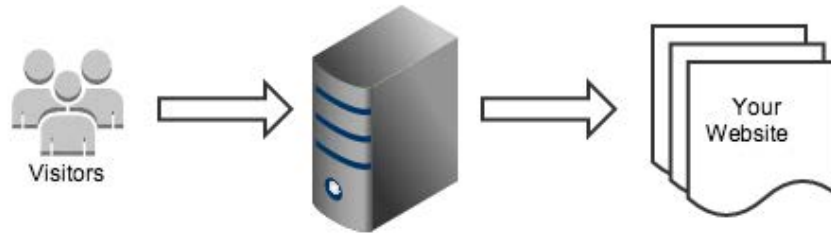

# Traditional vs. Cloud Web Hosting

## Traditional Web Hosting

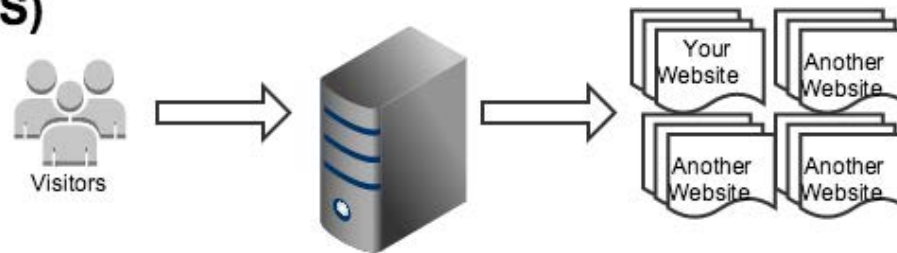

### Dedicated Server

One physical machine completely dedicated to your websites/business. Often used for websites with high traffic or server intense applications

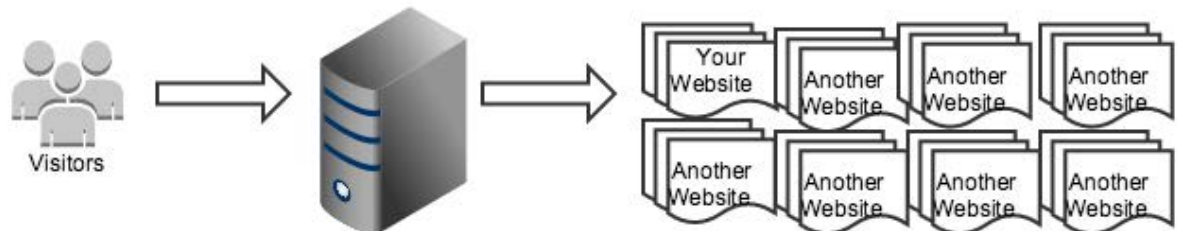

### Virtual Private Server (VPS)

One physical machine virtualized into several "sub" machines. Each virtual server is used to have guaranteed resources. Multiple websites/businesses share one physical machine.

### Shared Hosting

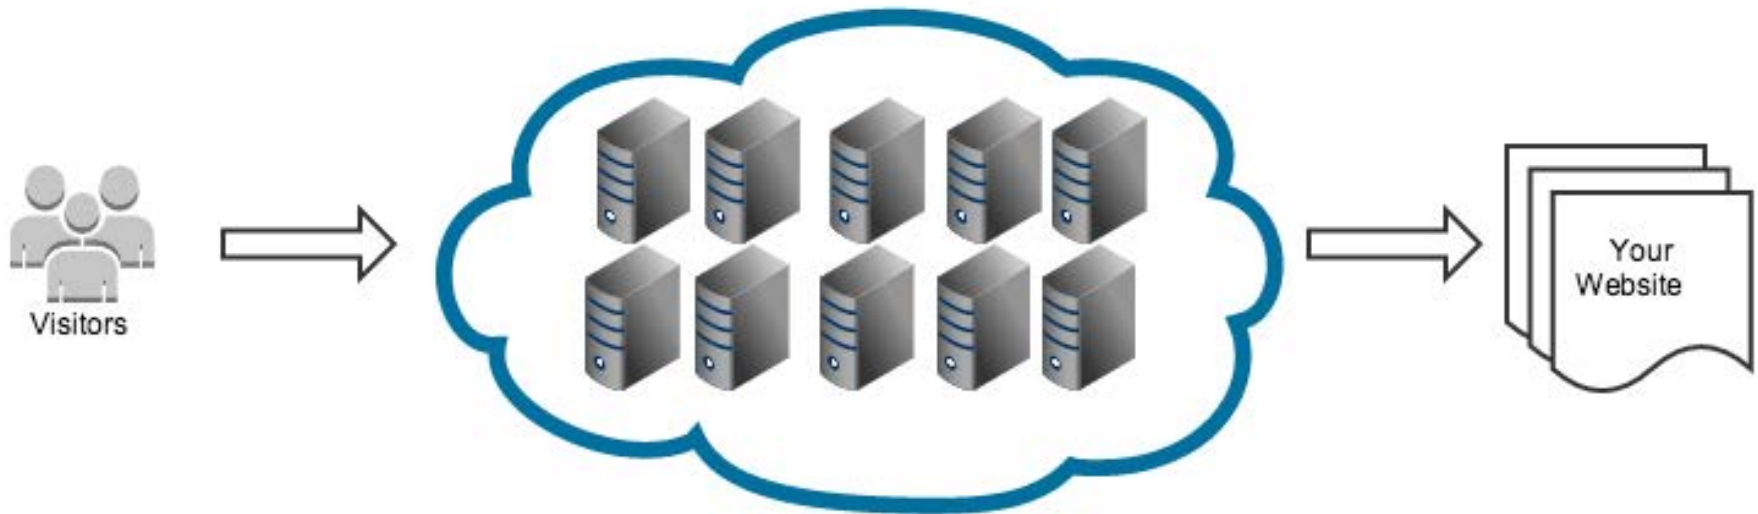

Hundreds if not thousands of websites/businesses all share one physical machine. This is why Shared Hosting is often so cheap as the company is assuming the customer won't use a lot of resources.

# Traditional vs. Cloud Web Hosting

## Cloud Web Hosting

Cloud computing allows multiple physical machines to act as one system. Therefore with Cloud Web Hosting, visitors aren't accessing just one machine, they're accessing several instantaneously.

# How The Cloud Benefits Your Business

- + Highest level of website performance guaranteed by multiple servers
- + Guaranteed server resources (CPU, RAM)
- + Redundant data storage
- + No single point of failure
- + Website growth flexibility
- + Lower pricing
- + Resources to scale up or down depending on growth optimizing your hosting costs.
- + Security guaranteed by many servers

# How To Setup Your Cloud Hosting Account

- + Navigate to our Managed Cloud Hosting packages on NameHero.com.
- + Decide which package best fits your business.
- + Main things to consider: Number Of Websites, Storage Space, Bandwidth
- + You can upgrade at anytime automatically

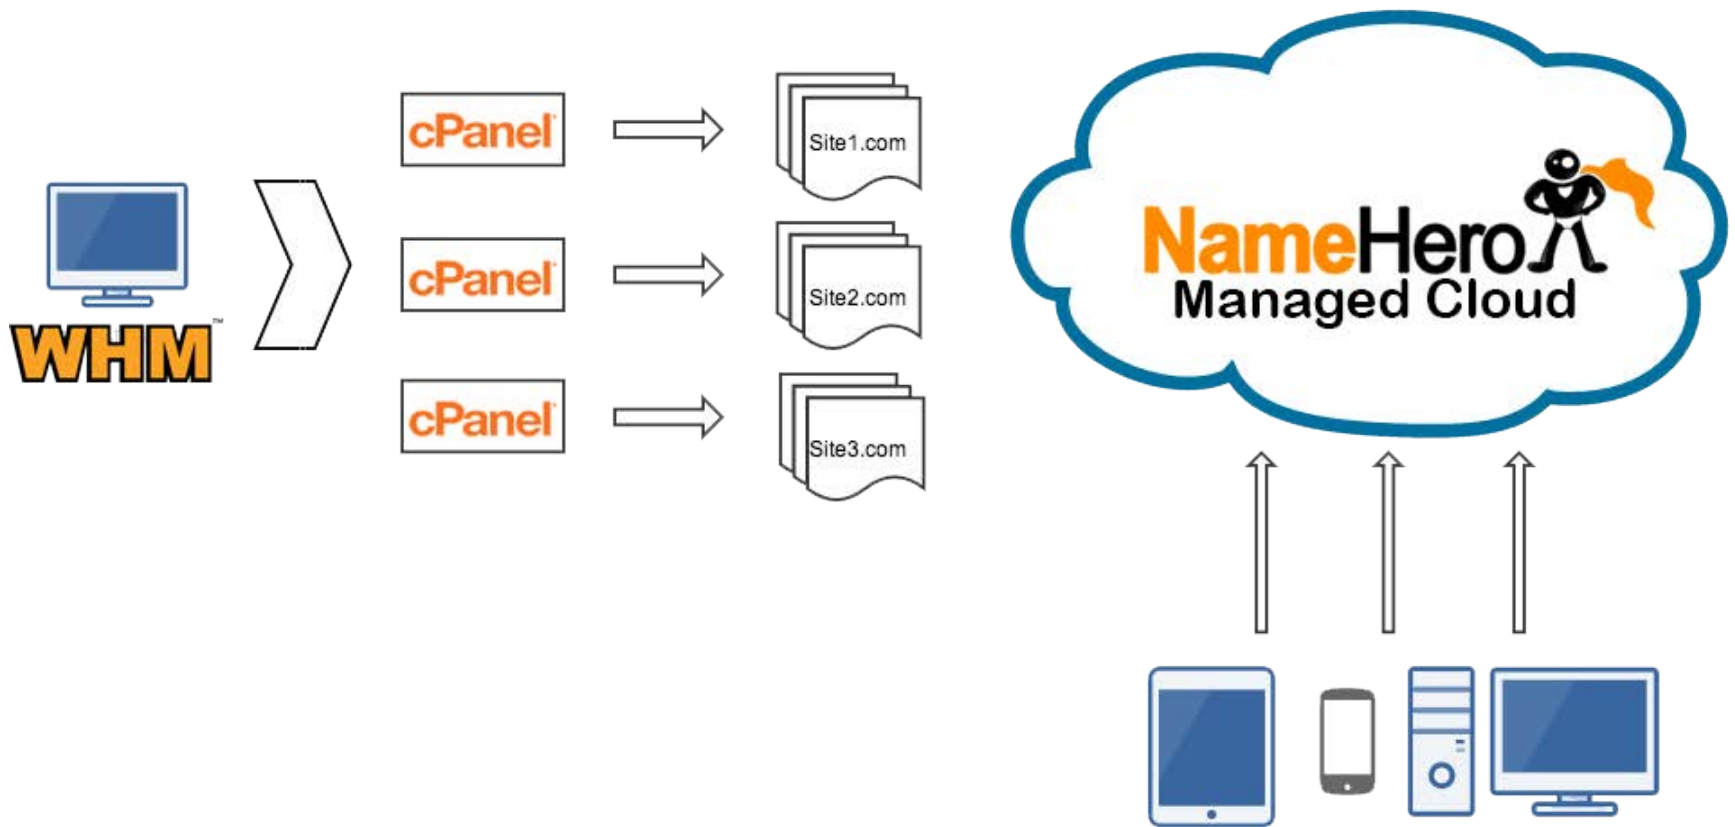

# How To Setup Your Cloud Hosting Account

- + Deploy the package that best fits your needs.
- + Modify your domain's name servers from the ones in the welcome email.
- + Login to the NameHero Platform to access your Web Host Manager (WHM).
- + WHM is the central control panel that allows you to take complete control over your Cloud Hosting Account.

The screenshot displays the NameHero.com Domain Management Platform dashboard. The navigation menu includes Domains, Managed Cloud Hosting, Website Security, Affiliates, Blog, Billing, and Help. The main content area features a 'Platform' header and a welcome message. Below this are four dashboard cards: 'My Domains' (47 (53)), 'My Services' (5 (6)), 'Tickets' (9), and 'Affiliates' (0). A red arrow points from the 'Tickets' card to the 'Open Support Tickets' section, which shows a table with columns for Subject, Status, Department, and Last Updated. Below this is the 'Due Invoices' section, which also shows a table with columns for Invoice #, Invoice Date, Due Date, Status, and Total. The footer contains copyright information and links for Privacy Policy, Terms of Use, Domain Registrant Education, and Registrant Benefits & Responsibilities.

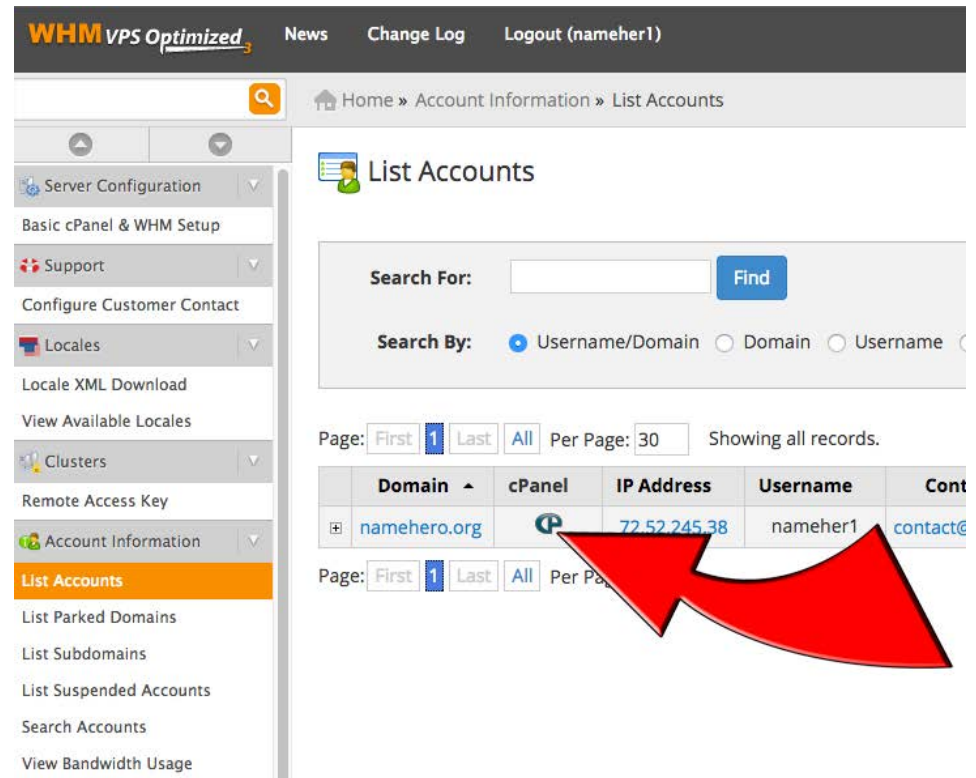

# How To Setup Your Cloud Hosting Account

# How To Manage Your Website

- + From Web Host Manager, you can access each site's cPanel where you can carry out any function necessary to manage your entire website.
- + Manage files, email addresses, FTP accounts, MySQL databases, install software, and much more from cPanel.

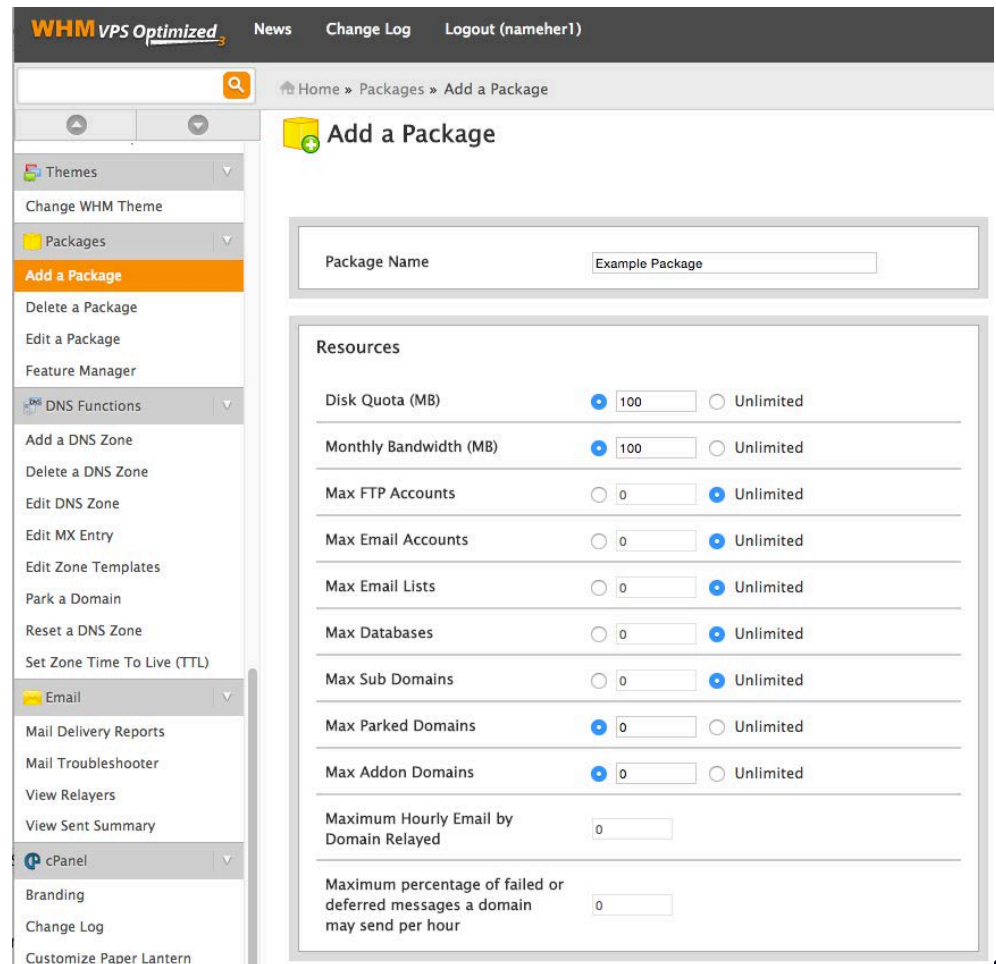

The screenshot shows the WHM VPS Optimized interface. The top navigation bar includes 'WHM VPS Optimized', 'News', 'Change Log', and 'Logout (nameher1)'. The breadcrumb trail is 'Home » Account Information » List Accounts'. The left sidebar contains a menu with categories like 'Server Configuration', 'Support', 'Locales', 'Clusters', and 'Account Information'. The 'List Accounts' option is highlighted in orange. The main content area shows a search bar with a 'Find' button and radio buttons for 'Search By' (Username/Domain, Domain, Username). Below the search bar is a table with the following data:

| Domain       | cPanel  | IP Address   | Username | Cont     |
|--------------|---|--------------|----------|----------|
| namehero.org |  | 72.52.245.38 | nameher1 | contact@ |

A red arrow points to the 'cPanel' column in the table. The table also includes pagination controls: 'Page: First 1 Last All Per Page: 30 Showing all records.'

# How To Add Additional Websites

- + Before you can add additional websites, you must create a package to define how the resources should be allocated.
- + Since we do not offer Unlimited Space and Bandwidth, you must set an integer to how much you allow the particular site to use.

The screenshot shows the WHM VPS Optimized interface. The top navigation bar includes 'News', 'Change Log', and 'Logout (nameher1)'. The breadcrumb trail is 'Home » Packages » Add a Package'. The left sidebar menu is expanded to 'Packages', with 'Add a Package' highlighted. The main content area is titled 'Add a Package' and contains the following form fields:

- Package Name:** A text input field containing 'Example Package'.
- Resources:** A section with multiple rows of resource allocation options, each with a radio button for 'Unlimited' and a text input field for a specific value.
  - Disk Quota (MB): Radio button selected for '100', 'Unlimited' is unselected.
  - Monthly Bandwidth (MB): Radio button selected for '100', 'Unlimited' is unselected.
  - Max FTP Accounts: Radio button selected for 'Unlimited', '0' is unselected.
  - Max Email Accounts: Radio button selected for 'Unlimited', '0' is unselected.
  - Max Email Lists: Radio button selected for 'Unlimited', '0' is unselected.
  - Max Databases: Radio button selected for 'Unlimited', '0' is unselected.
  - Max Sub Domains: Radio button selected for 'Unlimited', '0' is unselected.
  - Max Parked Domains: Radio button selected for '0', 'Unlimited' is unselected.
  - Max Addon Domains: Radio button selected for '0', 'Unlimited' is unselected.
  - Maximum Hourly Email by Domain Relayed: Text input field with '0'.
  - Maximum percentage of failed or deferred messages a domain may send per hour: Text input field with '0'.

# How To Add Additional Websites

- + After the package has been added, your account is ready to add additional websites.
- + Click on Create a New Account under Account Functions in Web Host Manager.
- + Fill out all the forms and select the package.

## Create a New Account

| Domain Information |   |
|--------------------|---|
| Domain             | <input type="text" value="website2.com"/>            |
| Username           | <input type="text" value="website2"/>                |
| Password           | <input type="password" value="....."/>               |
| Re-type Password   | <input type="password" value="....."/>               |
| Strength (Why?)    | <input type="text" value="OK (42/100)"/> <input type="button" value="Password Generator"/>  |
| Email              | <input type="text" value="contact@yourdomain.c"/>  |

| Package          |   |
|------------------|---|
| Choose a Package | <input type="text" value="nameher1_Examp"/>  |

# Welcome To The Cloud!

- + Congratulations! By now you are able to have all your websites in the Cloud.
- + Each domain can be individually managed from **cPanel**.
- + Your entire account can be managed in **Web Host Manager**.
