ATP2®

The Industry's Most Comprehensive and Accurate Rx Packaging System

TCGRx

ATP® 2 – THE ONLY MACHINE TO FIT ALL YOUR NEEDS

The ATP® 2 is the latest innovation from TCGRx. The ATP 2 has once again leaped ahead of all the others in reliability, longevity, and features to drive efficiency and growth for our pharmacy partners.

Expandable

Reliable

Efficient

Dual Tray System

With 2 integrated trays, you can continuously run your ATP 2 without interruptions.

2 trays allow for constant pre-staging of non-canistered medications.

Locking Canisters

Optional locking canisters prevent diversion and increase accountability for expensive canistered medications.

Protect your control medications.

Auto-Correcting Motor Bases

Self-correcting motor technology helps to reduce downtime and user intervention with canisters.
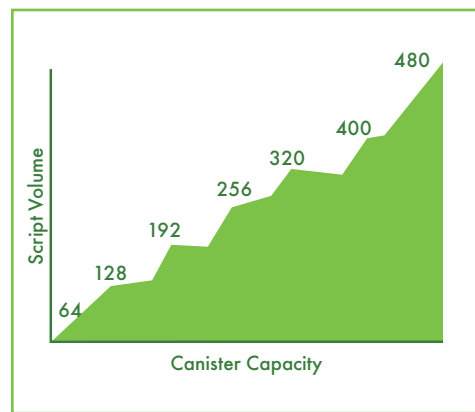

Reduce pill jams and maintain speed.

INNOVATION AT ITS CORE

Expandability

We engineered the ATP® 2 to make expansion simple. Start off with as little as you need, and let the machine grow, as your business grows.

Available in 64, 128, 192, 256, 320, 400 & 480 canisters.

Graphic Printing

Create pouches to suit your patients' needs. Color and vertical printing, pictures, barcodes, logos, icons, variable fonts and sizes give you maximum flexibility. Use reminder bags for non-oral solids to help at-home adherence.

Improve marketability to all patient types and address any patient or facility need.

Pouch Variability

Choosing between 3 pouch sizes using software controls, defaults and user-defined options, save time and money using appropriate-sized pouches for a facility. A 4th extra-small unit dose option is also available.

4 pouch sizes give you flexibility for the pharmacy, the patient and the facility.

Redundancy Option

The ATP 2 features the most simple redundancy program. With a swappable lower packaging unit (LPU) and spare motor bases, most hardware issues can be resolved in a matter of minutes.

Reduce downtime.

½-Tab Canister Dispensing

The ATP 2 allows for certain high-volume ½-tabs to be run through canisters. Use our BullsEye® tablet splitter to reduce manual ½-tab cutting.

Reduce trays and increase accuracy with ½-tab canisters.

BullsEye® Tablet Splitter

Automatically cut tablets perfectly in half, reducing damaged pills and providing more accurate doses to patients. When used in conjunction with the ATP® 2 and InspectRx™, the BullsEye reduces errors flagged in the tray fill or image verification process. The accuracy of the cuts enables canisters to automate more of the fill process.

Prepare ½-tabs for canister dispensing or trays.

Easy-to-Use Software

The ATP® 2 has the most versatile and cutting-edge software available in the market. Create multiple labels for any facility using any standard Windows font. Create pouches using the new drag-and-drop system to duplicate labels and groups. Include icons, pictures, borders around medications, barcodes and much more. The software also allows a preview of the actual pouch being dispensed to streamline the label creation process.

Add value to your pouches by customizing them for each facility.

AutoSense™ Smart Chip Canisters

AutoSense canisters are available to make your 480 canister machine as large as you need. Easily swap canisters in and out to reduce manual trays and to increase up-time.

With AutoSense, your machine has unlimited canister potential.

Changes Made Easy

Barcode scanning through the entire fill process helps make difficult tasks a breeze. If there is a manufacturer change mid-batch, barcode scan the new bottle, and the information automatically updates on the pouch.

Difficult NDC & lot changes are handled with ATP software control.

Spoolers & Winders

Maintaining the integrity of pouches as they move through the script-filling process, and keeping an organized work environment is critical. With a variety of winders and spoolers, both manual and automatic, TCGRx has what you need to organize pouches as efficiently as possible.

Wind, move and store pouches from ATP 2 with ease.

Continuous Improvement

The ATP 2 comes standard with optimization tools to drive production and efficiency over the long term.

A wide variety of user, performance and other reports will keep your machine running at peak performance.

Self-Calibration Kit

Manage drug changes more efficiently by having a documented process for re-calibrating canisters in your pharmacy. Our program provides training and tools to ensure that every pill is dispensing correctly from your ATP 2, while reducing downtime and operating costs.

Drug changes with canisters are simplified.

SmartTrayRx™ is an optional lighted tray system that allows technicians and pharmacists to fill and check using barcode validation, light direction and color-coded reminders. Barcoded trays ensure that the right pre-fill trays for the right batch are dispensed in the right sequence. Color-coded lights help technicians to identify partial, whole and multiple pills in a cell. This paperless system also provides user tracking for every step of the process.

InspectRx™ makes the pill inspection process safer and more accurate, by measuring each pill using 12 parameters of inspection. InspectRx inspects up to 5,400 pouches per hour, identifying and flagging exceptions for pharmacist review. The optional Collector™ unit further enhances the capabilities of the InspectRx by cutting, rolling and securing the medication strips, organized by patient or medication cabinet.

Automated

Light-Up Tray
Color coding to facilitate quick reference of quantity.

Barcode Driven
Barcoded trays and bulk bottles allow for dispensing accuracy.

Barcode scanning prevents costly errors.

User Metrics & Audit Reports
Comprehensive report will help drive improvements in personnel and equipment performance. Track every pill filled or checked by each user and identify areas of improvement.

Reports for daily, weekly or monthly audits, as you need them.

Accurate Analysis
Analysis of every pill provides insurance that every pouch leaving your facility is accurate. The InspectRx will flag any potential error and display it for pharmacist review, with all the other pouches in the batch.

Front and back of every pouch is imaged by InspectRx, analyzed and displayed for pharmacist review.

Pouch Corrector
The external photo station facilitates the correction and documentation of any pouches requiring attention. As the Corrector photographs the corrected pouch, it is immediately archived for future reference.

Immediate updating of corrected pouches means peace of mind for the pharmacy.

Batch Validator
Batch validator helps by separating rolls by unit, wing, etc. The validator is used to identify non-approved pouches and allow approved pouches to be sent ahead for shipping. Simply scan the barcoded roll, and follow the screen prompts – either with a green check to move the roll to shipping, or red "X" to review the roll.

Reduce pouch check time by automating the process.

ATP® 2 – CLOSING THE LOOP

TCGRx offers solutions for now and for your future. With products that touch every part of the dispense and delivery process, your pharmacy can continually grow and improve efficiency for years to come.

MEDICATION MANAGEMENT — MORE CONTROL, LESS SPACE

TCGRx believes in full-pharmacy efficiency, and offers a full line of inventory management, high-density storage, pharmacy fixtures, and much more.

Inventory Management

Beacon® manages your inventory down to the bottle and pill level with accurate tracking. Beacon excels at reducing your footprint, and providing inventory management tools such as expiration date tracking and overstock.

Beacon supplements and provides audits to monitor your existing inventory management system or re-order process.

Drug Change Management

One of the biggest challenges in a pharmacy is medication changes. Beacon manages this with ease, directing you to the "best use" bottle to fill the order. Barcode-driven software guarantees your NDC swaps are accurate and that medication is labeled and billed correctly.
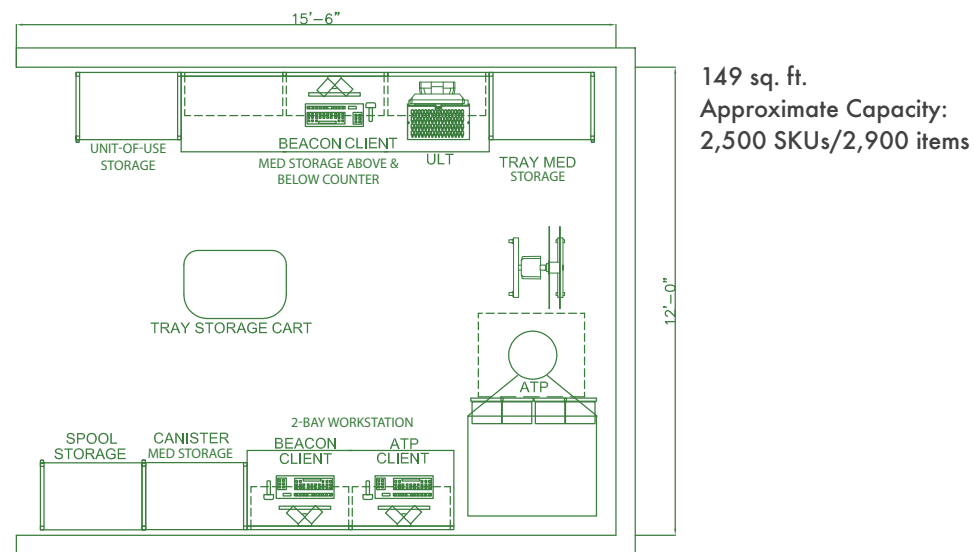

Increase control over NDC changes.

Space Savings

Beacon utilizes extremely high-density fixtures to make the most of your pharmacy space. This unique system allows for space savings and labor savings with reduced footsteps.

Gain more space for consulting, 340B, vaccine areas and expansion.

TCGRx UNSURPASSED SERVICE & SUPPORT

We offer extensive pre- and post-installation training and support. Our experienced team will ensure a smooth transition to the ATP® 2 and keep you running seamlessly for the long term.

Installation

A TCGRx Project Manager ensures that your project stays on track with regular meetings. The full implementation process is planned with your pharmacy staff to guarantee minimal impact to your business. An Implementation Specialist will be your point of contact until your new system is successfully operational in "Go-Live" mode.

Our staff supports you every step of the way:
- **Formulary analysis**
- **Space analysis**
- **Interface implementation**
- **Workflow**

Training

A TCGRx Implementation team will complete all user training related to the hardware and software functionality, and provide ideas for maximizing your production output. With the purchase of your Service Maintenance Agreement, you have unlimited training through an online learning management system, available 24/7. Onsite training at your facility for new users and super-users is available by request.

Training to help you and your staff 24/7.

Service & Customer Support

Our online diagnostic software ensures quick resolution to any software problem encountered with our ATP 2 System.

Remote support means less interruptions to your pharmacy, available 24/7.

FAQs About Customer Service

What are the qualifications of our service technicians?
Our team of service engineers has over ten years of field experience. We have a reputation for integrity, knowledge, and responsiveness.

What are our service capabilities?
We have more than 350 professionals who service pharmacy automation equipment. We are headquartered in Wisconsin, with service providers in every major metropolitan city and Canada, with 24 hour service, 365 days a year.
