# STOP FYRE

## The World's BEST Fire Extinguisher

888-673-4734 • AKE.com

**Trusted by Farmers Across America to Protect What Matters Most**

# Don't Get Burned!®

Can you risk a fire extinguisher that may not work?

*"Used on combine – the shaft and bearing smoldered overnight. My sons used it and saved the combine."  
-L.R. I, Lake Norden, SD*

This farmer didn't buy STOP-FYRE® for 2 years. He'd never had a fire, had dry chemical fire extinguishers already, and he had insurance. His dry chemical units did not work.

After his loss, his deductible cost him \$50,000+. He bought STOP-FYRE® right away and sent us this photo.

*"After seeing STOP-FYRE in action, I can't imagine owning anything else to protect my farm and machinery."  
-Dave S., Farmer & NTPA CEO*

## What is STOP-FYRE®?

STOP-FYRE® has been called "The World's BEST Fire Extinguisher®" by people who regularly rely on fire safety equipment – everyone from farmers to fire chiefs. STOP-FYRE® is the only multi-shot, clean agent fire extinguisher on the market. Farmers love it because it's so effective and does not cause damage to machinery. Firefighters love it because it quickly gets to those hard-to-reach fires that traditional methods don't. Our customers love it because it works – PERIOD. STOP-FYRE® saves lives and property saving you money, hassle, and tragedy. And with a lifetime guarantee, STOP-FYRE® gives you Peace-of-Mind. We call it - "The World's BEST Fire Extinguisher®" for a reason.

## STOP-FYRE® Advantage

Why is STOP-FYRE® The World's BEST Fire Extinguisher® ?

STOP-FYRE®	Dry Chemical Powder
1 No monthly service required	1 Must be shaken every month to free powder
2 No yearly service required	2 Must be professionally serviced every year
3 Multi-Shot Unit	3 Must be professionally serviced after each use
4 No mess or clean up	4 Very messy – difficult & expensive to clean up
5 Non-Corrosive	5 Corrosive to electronics & metals
6 Spray in vicinity of fire & gas expands	6 Must have a direct shot at fire
7 Compact & Lightweight	7 Bulky & Heavy
8 So easy a 4-year old can use it	8 Complicated & Intimidating
9 Lifetime No-Hassle Guarantee™	9 Breakable / Not durable / No replacement

## Farm Fire Safety

As a farmer, your time and equipment are very precious and you have a specific set of fire risks. Here's just a few examples of those risks:

- Activities with a high chance of fire (e.g. welding, cutting, harvest, etc.)
- Large volume of flammables (e.g. hay, fuel, wood, etc.)
- Longer fire department response times
- Livelihood and home are at risk at the same time
- Average a fire every 3-4 years large enough to need a fire extinguisher
- Expensive machinery, property, and buildings at risk
- Lack of time to maintain dry chemical units

## Farm Fire Statistics

From 2007-2011 the National Fire Protection Agency (NFPA) studied the amount of fires and their effects across many types of structures. Below are their findings for agricultural structures (all numbers are annual averages).

- For Fires Confined to the Object that Caught Fire:
- 260 fires
  - \$4,000,000 in property damage (\$15,000 per fire)
- For Fires that Spread Beyond the Burning Object
- 610 fires
  - \$44,000,000 in property damage (\$72,000 per fire)
