Easy Reporter® Release 2.12 Highlights

SpinifexIT is constantly working to add new functionality to our solutions in order to improve your SAP and SuccessFactors business processes. The new **Easy Reporter** release 2.12 is available now and contains a significant number of innovative features and enhancements that improve the usability and performance of the world's leading SAP HCM and Payroll reporting solution.

The enhancements in release 2.12 include:

Enhanced Reporting Performance

- A new job splitting feature helps to reduce the run time of large reports by splitting the process into concurrent jobs before consolidating into a single report output. The result is faster processing times for many reports.

- The new dynamic infotype selection feature allows users to include infotype fields in their report selection criteria, giving much more flexibility over standard selection fields.

Dynamic New User Interface

- Easy Reporter 2.12 delivers new and updated features to its existing UI5 interface that improves report output, format and usability on browsers and mobile devices.

Increased Reporting Flexibility

- Easy Reporter's best-in-class interface functionality now includes the ability to generate interface and report output in XML format.

- New configurable report selection options allow users to create their own selection screen defaults.

- Optional user exits now allow you to more easily identify managers across organizational structures, infotype fields or even custom tables when designing reports.

- New, more powerful field mapping and conversion options provide added report output flexibility.

Powerful New Usability

- Designing reports is even faster now that Easy Reporter allows users to quickly search for report fields by name or technical name.

- New functionality allows you to dynamically insert a range of wage types into a report, reducing the time it takes to build payroll reports and providing greater output flexibility.

Expanded Data Options and Auditability

- The addition of system fields will boost audit reporting by allowing you to include data about systems and activity in your reports.

- The addition of time evaluation transfer data to reports improves report data options.

- Easy Reporter now includes payroll payment data (from REGUH, REGUP, BKNA and PEVSH, etc.) in interface files and reports.

- Easy Reporter now provides the added flexibility of including user-specified date, numeric or text fields into reports.

- The wide range of payroll fields and results available in reports and interfaces now includes voided payroll results.

- Expanded vacancy reporting allows you to easily identify and report on prior holders of positions in your organizational structures.
