

Chinavasion Introduces The 'Gorilla Wheel'; A New Electric One Wheeled Scooter

This new one wheeled electric scooter brings greater range and speed to the electric rideables market.

Electric rideables are fast becoming established in many countries and as manufacturing cost continue to fall they are becoming more affordable.

PR Manager at Chinavasion Ms. Rose Li says, “What would have cost over a thousand dollars to make a few years ago can now be manufactured for a few hundred bucks. This in large part is due to the falling costs of gyroscopic technology and cheaper, better performing lithium batteries.”

With greater affordability more companies are manufacturing an ever increasing range of affordable electric rideables, which wholesalers such as Chinavasion are keen to deliver to a growing number of consumers.

Ms Li says, “Chinavasion, recognizing this trend, is keen to secure a stable footing in this rapidly developing market so as to service the needs of a growing customer base.”

The latest personal electronic transportation device from Chinavasion is a one wheeled self balancing electric scooter called the 'Gorilla Wheel'.

Unlike the Uni-wheel, that Chinavasion featured about one year ago, this one wheeled scooter lets the user sit astride the wheel rather than having to remain standing.

As the user is seated it's more suited to longer journeys and easier to ride.

Ms. Rose Li says, “Unlike other rideables the 'Gorilla Wheel' [one wheel electric scooter](#) puts the rider in a comfortable seating position which means they are more stable and in better control.

Like on a bike, the rider can easily stop and put their feet on the ground and its lower ride high and non-threatening appearance makes it less threatening to pedestrians.”

This electric scooter has a 500W motor that can take it to a top speed of 22 mph (35 km/h), and with a 300Wh Samsung lithium battery, it has a maximum range of 22 miles (35km) and a top load capacity of 130KG.

Rose Li stated, “This new one wheeled rideable is ideal for those journeys where it's a little too far to comfortably walk but not practical to take a car.”

“Transitioning between pedestrian walkways and cycle lanes this one wheel electric scooter can be comfortably used for shopping trips around town, going out to meet friends or a simple commute to work,” Concluded Ms Li.

The growing popularity of one wheeled rideables, like the Uni-wheel as well as two wheeled counterparts such as the Galactic Wheel Dual Wheel scooter, looks set to continue especially as they become more affordable.

Ms Li states, “In order to capitalize on this new market Chinavasion is determined to offer the best range of affordable electric scooters so as discerning consumers have an alternative to main brand western products, which all too frequently cost several times more but fail to deliver any better performances.”

[China wholesale](#) company, Chinavasion, is a leading supplier of [outdoor gadget](#)s and provides electric rideables at affordable wholesale prices. With their express worldwide shipping partners they can send nearly anywhere in the world.
