H&W to support its software for Day One release of new z/OS version

BOISE, Idaho – September 30, 2015 – H&W Computer Systems (H&W) has announced that it is supporting its software for use with the new 2.2 version of the z/OS® operating system, which IBM is releasing today. Specific H&W products covered by this support include SYSB-II®, SYSB®, SYSD® (with PTF), CPMS® (with PTF), SYSS®, SYSJ, SYSM®, WebTek®, and Wizard Mail.

Day One support is a way third-party vendors can reassure customers that their software runs with new versions of IBM products so those customers can upgrade without delay. "We appreciate the need to adopt a new z/OS version quickly, and we want to give customers confidence that the H&W software they trust will continue performing optimally after an operating system upgrade," said Matt Link, President of H&W. "Day One allows us to do that. It's an important piece of the quality service that customers expect and deserve."

An IBM Advanced Business partner, H&W participates in the IBM vendor program so it can provide Day One support. "We maintain a good working relationship with IBM so that we can help facilitate customers' seamless transition to new software," said Link.

H&W offers Day One support and other important services because its business software is a key component in the operations of many organizations. "Through programs like Day One, we want to demonstrate our commitment to customers' success," said Link. "We continue every day to strive to earn the trust of customers and the marketplace."

For more information about specifically supported versions of H&W software and any needed PTFs, visit www.hwcs.com and go to the Specifications page for a particular product.
