

# SIMPLE

## Medical data is a prime target for cyber criminals.

With cloud solutions on the rise, instances of costly security breaches are becoming more commonplace in healthcare every day. Vaultara manages swift transfers while keeping sensitive data safe behind your firewall.

## Vaultara is easy to deploy, easy to use, and easy to oversee.

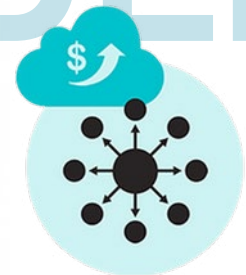

Avoid IT headaches, downtime, or migrations with a smooth, remote install to get up and running. A clean and intuitive user interface allows organizations to quickly send or receive studies for collaboration and a comprehensive audit log makes oversight a breeze.

# SECURE

# AFFORDABLE

## Vaultara's pricing is as straightforward as the product.

Unlike cloud solutions whose costs can fluctuate wildly with use, Vaultara allows for an unlimited number of users, recipients, and transactions. There are no hidden costs, study-size limitations, or overage charges. The supremely easy implementation process puts no strain on IT resources or budget.

Medical image sharing on the fly

### Keep your records in-house and under your control

Skip the risk and volatility of cloud solutions and maintain complete local control. Vaultara's self-hosted image transfer lets you send true DICOM images and associated reports directly to intended recipients. Once you've granted permission, authentication is underway and files can be accessed or downloaded according to your specifications.

### Save time and money, while providing more responsive care for patients

Response time matters in healthcare. Vaultara allows you to send and receive studies to and from any hospital, clinic, patient, or legal counsel at a moment's notice.

### Achieve seamless patient transfers and reduce unnecessary procedures

Misplaced or unreadable CDs compromise efficient patient triage. With Vaultara's comprehensive compatibility, the records physicians need to see are viewable anytime, from any device. When transferring patients, move their studies instantly to the destination facility for uninterrupted care.

### Streamline image exchanges for you and your network

While CDs have inherent liabilities and are less supported every day, all organizations are not modernizing at the same pace. Phase out unwanted discs from external facilities and eliminate ingestion hassles by leveraging Vaultara's image upload functionality.
