

Expand Your Organization's Supply Chain Control with Comprehensive Inventory Management

Gain 360-Degree Inventory Visibility

A world-class inventory system, **Apptricity** Inventory delivers true business value by providing 360-degree visibility. The solution supplies stock quantity, location, shelf-life and expiration information and ensures inventory replenishment according to company threshold limits. You receive real-time business intelligence through reporting. Complete awareness of all inventory locations enterprise-wide helps eliminate costly mistakes such as ordering products for one location while another has plenty on hand.

This rapidly deployable solution improves operations by providing the ability to oversee inventory levels, trends, locations and more, supported by a user-friendly interface and efficient reporting functions. *Inventory* also enables at-a-glance visibility and tracking for products, parts on hand, supplies and materials. This simplifies the reordering process, enhances accuracy and provides a comprehensive view of inventory availability and location.

The Automation Advantage

- Complete at-a-glance visibility
- Enterprise-wide inventory oversight
- Real-time business intelligence
- Handheld device compatibility
- Full mobile support

Establish an Automated, Configurable System

The solution is built upon a proven technology framework, enabling unprecedented adaptability and user configuration capabilities. Due to their advanced service-oriented architecture (SOA) framework, our applications allow you to seamlessly add components as needed. The result is a comprehensive, integrated inventory system that automates processes across your entire enterprise.

Inventory employs industry best practices to streamline daily operations for facilities of any size, including distribution centers, storage locations, manufacturing facilities and retail stores. The solution can be deployed as a perpetual license for maximum internal control or as a convenient Software as a Service (SaaS) subscription for organizations requiring a less complex implementation.

Achieve Comprehensive Inventory Oversight

The system delivers a wide range of valuable capabilities to give you start-to-finish inventory control:

- Provides a 360-degree view of inventory levels using multiple categories, including stock keeping unit (SKU), product type, barcode, manufacturer, supplier and facility
- Improves inventory accuracy and efficiency by offering multiple receiving methods
- Shows location of item by facility with a rollup by SKU, product or barcode
- Tracks inventory by any unit of measure
- Enables queries by shelf life, expiration date, product and more
- Supplies out-of-the box reports as well as ad hoc reporting
- Leverages radio frequency (RF) and other wireless identification technologies for real-time business intelligence on quantity, location, condition, status and other storage and shipping data
- Facilitates implementation of configurable business rules to meet advanced inventory control requirements, including the handling of hazardous materials, use-by dates and more
- Offers full mobile support, including iOS[®], Android[®] and Windows Phone[®] devices

Choose Your Receiving Method

Inventory accommodates a number of receiving methods:

- Manual entry
- Electronic Data Interchange (EDI)
- Advanced Shipment Notification (ASN)
- RF

Perform Warehouse Activities Efficiently

RF device compatibility enables the solution to accept input from handheld RF devices that are used for warehouse activities. These devices use RF waves to transmit data to and from the host system. Handheld RF devices enable you to do the following:

- Process the arrival of inbound loads
- Process the receipt of inbound loads
- Perform putaway
- Move inventory items within the same facility or across multiple locations

Leverage Key Features to Streamline Operations

The following features help increase operational efficiencies:

- Optimization of replenishment points and lead times for improved accuracy
- Integration with point-of-sale applications
- Item status tracking that includes raw materials, work in progress, finished goods and goods for resale
- Ability to encompass hundreds of locations across the enterprise or just a single storage facility
- Simplified inventory searches using multiple categories
- Integration with ASN and the ability to leverage RF and other wireless technologies
- Advanced reporting capabilities

Capitalize on the Benefits of Automation

The solution provides numerous benefits:

- Reduces labor and storage costs by maintaining optimal inventory levels
- Improves inventory accuracy and efficiency
- Speeds fulfillment and eliminates slowdowns due to backorders, stockouts and shortages
- Secures product quality by monitoring shelf life and expiration
- Integrates with existing legacy systems and other technologies, including ordering applications and accounting systems
- Integrates with other Apptricity solutions

How it Works

Inventory enables you to simplify and streamline your inventory management processes.

Inbound receiving: Optimize your inventory by automating manual processes and managing shipped goods using real-time exception reporting. The solution provides complete compatibility with Automated Identification Data Collection (AIDC) technologies such as radio frequency identification (RFID), EDI and so on, as well as barcode scanners.

Complete inventory tracking: Accurate, real-time tracking enables you to make better purchasing decisions and minimize misdirected and misplaced inventory.

Visibility: Centralized, up-to-the-minute visibility helps you maintain control as inventory moves to a new location or through the supply chain.

Integration: You can seamlessly add Apptricity components as needed for a comprehensive, integrated mobile inventory solution that automates processes across your entire enterprise.

About Apptricity

Apptricity Corporation provides mission-critical supply chain management and spend management solutions to small, midsize and global enterprises and government organizations worldwide. Apptricity software and solutions mobilize any enterprise with unprecedented levels of real-time information and business intelligence so management has visibility into every action and transaction within the enterprise and among its partners, customers and suppliers. Powered by Apptricity JetStream platform, our solutions enhance legacy enterprise applications and extend the value of information technology investments. Our platform enables us to address the universal objectives of business, government and the military with accelerated business processes and command visibility.
