

# akkadian Provisioning Manager Express

## Empower Your Provisioners

Akkadian Labs develops applications to streamline your business processes via collaboration software. **akkadian Provisioning Manager Express (aPME)** consolidates the task of adding user and device configurations into one simple, web-based interface.

### The Challenge

Manually adding new users and devices into Cisco Unified Communications Manager (CUCM) costs your company time—and time is money. Your company is losing time on training administrators to navigate CUCM, time required for them to learn the necessary actions, time to add devices or users and time addressing mistakes. Moreover, the process' complexity means it's often your highest paid IT professionals spending this time on provisioning.

### The Solution

Akkadian Labs offers aPME, a software solution designed to replace CUCM's tedious provisioning process with a consolidated interface that's simple enough for help desk level employees to administer. aPME utilizes templates to streamline and simplify the provisioning process, in-turn, shortening training time and freeing your top IT professionals from these tasks.

aPME gives administrators the ability to efficiently add, modify and delete users and devices from any configured application server. Changes can be made to CUCM, Unity Connection or IM&P, all from aPME's single, easy to use web-based interface. Multiple templates can be developed for various employee groups within your organization. Administration of templates is straightforward and uses common settings. aPME allows your team to do more with less...less time, less frustration and less cost for your company.
