

Your commitment to sustainable packaging begins the moment you choose a container from Chicago Paper Tube & Can Company. EcoPush is the newest member of our Earth-conscious line of containers.

## ABOUT ECOPUSH™

EcoPush is an all-paperboard direct package for oil-based solids such as balm, salves, solid perfume, sunscreen and deodorant.

Designed to replace pocket-sized plastic twist-up applicators.

Tube has a fitted cap on top and a free moving paperboard disc which pushes upwards to dispense the product.

Various volumes available from .3oz - 2oz.

## CONSTRUCTION

Container is made from up to 80% recycled materials (60% post-consumer content).

Special paper liner and internal composition limit the potential for oil to penetrate the inner architecture of the package.

Adhesives are FDA compliant and aqueous, not solvent-based.

## BENEFITS

EcoPush ends dependence on plastic, metal and glass components traditionally used as primary-packaging materials. All resources previously consumed during the life cycle of the primary packaging are conserved.

Container is biodegradable, compostable and can be recycled.

No pollutants are added to the air, water or waste stream in the production process of EcoPush.

Chicago Paper Tube & Can Company, Inc. is a leading manufacturer of custom, high-end, round paperboard containers and industrial products exclusively manufactured in the United States. Headquartered in Chicago since 1898, Chicago Paper Tube provides sustainable packaging for designer brands and luxury labels within a diverse group of industries, including health and beauty, home care and gourmet foods.
