

MEET DOMOTZ.

The home monitoring and tech support system.

Domotz is a monitoring system for the smart home. It lets consumers and small businesses connect to and interact with any device in a home or business via mobile or web app. Domotz supports all connected devices and sensors, no matter the brand or manufacturer. It works alongside existing Home Control Gateways such as SmartThings and Nest by adding an additional layer of information and connectivity to the home.

TROUBLESHOOTING

Detect, solve and prevent any technology problem in your home..

HOME VITALS

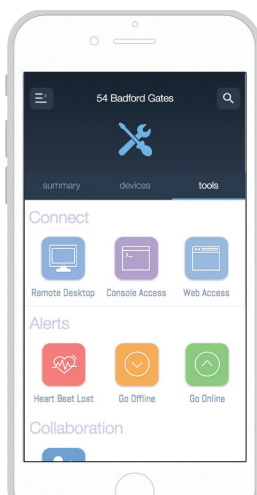

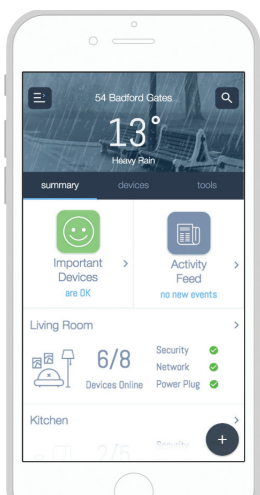

Get home stats like: empty/occupied status, average temperature, last movement detected, opened door and if any lights are on.

HOME ACTIVITY

See real time usage of TV's, gaming consoles and streaming media. See which mobile devices are at home or not.

HOME SAFETY

Monitor your valuables and get alerted in the event of smoke, fire or flooding.

USERS DOMOTZ

"Thanks for the kick ass product."
(Chris, USA)

"This is the perfect product to have to monitor your home or business network. It is a must have!"
(Kevin S, USA)

PARTNER ENGINE

Domotz offers third parties like telcos, insurance providers and utilities a robust platform and APIs for administering innovative IoT projects. Contact us at partners@domotz.com to find out more.

HOW IT WORKS

- 1. AGENT:** The Domotz Agent software is installed in a home via supported hardware platforms or third party routers. It automatically connects to and complements any device and sensor in your smart home (**Nest, Printers, Smart TVs, Smart Locks**) as well as any Home Automation Gateway (**Smart Things, Wink, Control4**). – if it's connected Domotz finds it.
- 2. CLOUD:** Data gathered in the home is securely sent to the Domotz cloud.
- 3. APP:** Users connect to a home or an office remotely via Mobile and Web Apps.

Supported Hardware:

Synology

QNAP

NETGEAR
ReadyNAS
