

Your greatest cyber-defense starts with your employees. Help them stay sharp with the online **tandem** Phishing module from CoNetrix. **tandem Phishing** is an online framework designed to provide social engineering tests and training in the form of simulated phishing emails.

What is phishing?

Phishing is a digital form of social engineering that uses fraudulent, authentic-looking emails to trick users into performing certain actions, like clicking links to bogus websites that request confidential information.

Why simulate phishing scenarios?

As part of employee training, financial institutions are directed by the Agencies (FFIEC, FDIC, OCC, NCUA, and Federal Reserve) to encourage employee awareness of and preparation for a variety of social engineering attacks, including **phishing email scams**.

Simulated phishing email testing is a practical way for employees to learn how to **spot phony emails**. Making sure employees are well-educated about the dangers of phishing is an important aspect in maintaining cybersecurity.

What is CoNetrix offering?

CoNetrix developed **tandem** Phishing to help financial institutions test employee preparedness for recognizing and avoiding phishing attacks.

tandem Phishing allows you to:

- Assess and educate employees about social engineering schemes
- Send an unlimited number of automated phishing emails to your employees
- Contact employees using unfamiliar or recognizable email addresses
- Select custom groups of recipients for diverse testing results
- Use CoNetrix templates or create your own
- Create unique landing pages for user education
- Review analytics and download reports

tandem® is safe to use online!

Access the web-based application anywhere you have an Internet connection using a secure login to our SSAE 16 examined data center. Set up password expiration and multi-factor login authentication for additional security measures.

tandem® Phishing

How it works:

tandem® Phishing Features:

- Email templates created and updated by security and compliance experts
- Educational mock webpages to teach your employees about the dangers of phishing attacks 
- Various email addresses to send emails from
- An online general security awareness training course
- Professional documents downloadable in Microsoft Word, Excel and/or Adobe PDF formats 
- Integration with other CoNetrix online software
- A one year subscription to updates
- Anywhere/anytime Internet access through a secure, online portal
- Multi-factor authentication (optional)
- Multi-user access & access roles
- No software installation or equipment costs
- Free training workshops to stay educated on the software

Support

- Ask questions and get support from our responsive support team, which is backed by an entire department of IT security auditors.
- Jump in with Getting Started pages, help text, recorded demos, and workshop webinars.
- Attend our annual User Group to learn more about **tandem** and see how other institutions are using it.
