

IntelliBoard and PowerSchool to Integrate Moodle with Student Information System

Integration provides key data to parents, instructors, school administrators and students

Monroe, CT – 1/5/2016 – IntelliBoard.net, the analytics and reporting service for education communities and institutions using the Moodle Learning Management System, and PowerSchool, the world’s leading web-based student information system, are joining forces through PowerSchool’s Independent Software Vendor (ISV) partnership program. As part of the agreement, IntelliBoard is integrating Moodle gradebook and course participation with PowerSchool, bringing analytics and reporting to the next level for parents, teachers, instructors, and school administrators.

PowerSchool, the world’s leading student information system, supports 40 million users and over 15 million students in 73 countries, playing a central role in a network of integrated systems designed to provide K-12 districts with a cohesive solution to manage all mission-critical administrative processes and instructional data. PowerSchool enables today’s educators to make timely decisions that impact student performance while creating a collaborative environment for parents, teachers and students to work together in preparing 21st century learners for the future.

“Integrating two powerful tools like Moodle and PowerSchool is a key to provide learning data to parents, instructors, school administrators and students,” said Anatoliy Kochnev, CEO of IntelliBoard, Inc. “We are bringing the ability to sync grades and student learning progress seamlessly between the two different systems so teachers and school administrators can focus on what is important for their students, making the whole process valuable. We are proud to join the PowerSchool ISV Partner Program and bring more time saving opportunities to education institutions using Moodle.”

Integrating Moodle and PowerSchool as one solution creates a completely new opportunity for Moodle gradebook with student grades and progress being synced automatically with the Student Information System (SIS). IntelliBoard analytics for Moodle built with real-time LMS monitoring and reports used by administrators and instructors, together with PowerSchool SIS, creates a synergistic solution for educational institutions which want to seamlessly integrate both systems, thus saving enormous amounts of data entry time. Schools that use Moodle and PowerSchool together simultaneously are now able to immediately identify at-risk students so that each learner has a longer timeframe to receive the appropriate and necessary academic support to succeed.

“Ultimately, the partnership allows for a stronger relationship between schools and their communities,” said Karin Holtz, vice president of Alliances and Business Development. “We are excited to see this partnership bring greater usability to the PowerSchool community.”
