

# MOBILE BEDSIDE CONSENTS

## MOVING TO PAPERLESS CONSENT FORMS

Technology has brought paperless operations to many areas across healthcare organizations, but consent processes are often still a lingering source of paper forms and slow, manual processes.

With FormFast, you can electronically capture the appropriate consents at a patient's bedside on a mobile tablet. Consent documents are instantly archived, preventing lost documents, expediting care and keeping your healthcare organization in compliance.

## STREAMLINING CONSENT WORKFLOW

FormFast integrates with your EHR system to present the correct documentation for patient signatures on mobile devices - making consent processes streamlined. The patient can read the form on a mobile device, and conveniently sign the form electronically with their finger or stylus from their bedside.

Staff can then quickly self-sign the form and date-time stamps are automatically applied. Upon the submission of the consent form, it is archived into the EHR - preventing lost information and making documentation instantly visible to the care team.

## CUTTING CONFUSION AND MITIGATING RISK

A common challenge for many hospitals today is that patients do not always thoroughly understand the fundamental information regarding their treatment - even after a consent form has been signed. FormFast plays a critical role in digitizing and simplifying the informed consent process - for staff and for patients.

As leading healthcare organizations realize the associated risk and liabilities associated with inefficient consent processes, they have turned to FormFast to help ensure proper consent form management and to enhance patient education.

### Solution Benefits

- Ensure compliance
- Manage risk and reduce liability
- Promote patient safety
- Deliver a better patient experience
- Boost staff productivity
- Cut paper and costs

## MOBILE BEDSIDE CONSENTS

**Ensure Compliance**

Applying FormFast's workflow technology to the consent process eliminates concerns surrounding lost and improperly completed forms and ensures the proper completion and archival of every consent form.

**Manage Risk & Reduce Liability**

FormFast eliminates the risks associated with using an outdated consent form and the liabilities associated with incorrect information, as forms are guaranteed to always be the most up-to-date, approved version.

**Promote Patient Safety**

To ensure the patient's understanding of the consent, the consent format is legible and easily enlarged on a tablet for optimal viewing. To avoid confusion, the electronic form can include required field to confirm patient understanding.

**Deliver a Better Patient Experience**

Where paper forms and tethered mobile devices can make it difficult for patients to read and sign documents when lying in a hospital bed, FormFast's truly mobile capabilities provide an optimal signature experience for patients in a prone position.

**Boost Staff Productivity**

With FormFast, the consent process is streamlined and physicians and staff are available to spend more quality time with patients, as the time required to obtain, label, customize and manage paper consent forms is eliminated.

**Cut Paper & Costs**

FormFast cuts costs associated with paper, toner, printing, scanning and storage by digitizing consent processes and increasing productivity. On forms costs alone, hospitals can save thousands of dollars per year with FormFast's mobile bedside consents.

**Key Features**

- Seamless EHR system integration
- User-friendly, mobile tablet experience
- Compatible across all tablet device hardware platforms
- Supports multiple signatures on each form image
- On-demand form selection
- Indication of incomplete forms
- Free-text fields for real-time physician and clinician notes
- Checkbox capability for advanced consent options
- Required content review and understanding confirmation fields using patient initials or a checkbox
- Automatic date/time stamp for data integrity
- Immediate archival of completed consent forms
