VOQUZ introduces cloud solution for SAP license management software

samQ Cloud allows independent analysis and optimization of SAP licenses via the cloud

Ismaning, Germany, 03-08-2016 – VOQUZ introduces samQ Cloud, the first cloud solution that allows companies to independently analyze and optimize their SAP license inventory. Determining their company's optimization potential is free for everyone and accessible via <http://labs.voquz.com>. As with the on-premise version samQ Cloud optimizes SAP licenses based on actual user transactions.

"samQ Cloud is revolutionary for the SAP license management," says Helmut Fleischmann, CEO of the VOQUZ Group. "It is the first tool in the cloud which helps SAP customers manage and optimize their licenses. Without any additional consultation or complicated software installation."

samQ Cloud users do not need to install the software in their own SAP system, but can access the tool online, which makes analyzing and optimizing the license inventory even faster. In addition, the tool offers special customizing options to map details from the company's specific SAP license agreement.

The software is especially interesting for medium-sized companies with up to 500 SAP users, since for them the analysis and optimization process is entirely free. But also companies with more than 500 SAP users can get a free calculation of their optimization potential. On that basis, they can decide whether they would like to take advantage of the additional optimization service.

Access to samQ Cloud portal: <http://labs.voquz.com/en/sap-loesungen/samq-cloud/>
