## **Haven Senior Horizons Unveils New Juniper Unit**

**Phoenix, AZ (March 15, 2016)**--Officials at Haven Senior Horizons recently unveiled a sneak peek of its new wing, the Juniper Unit, and renovation project that will primarily focus on the expansion and upgrade of all inpatient geriatric mental health services in the facility.

The expansion includes an additional 15 beds, activity room, family area, medical examination room, dining room and bariatric capabilities. This project will mark the first major architectural improvements to the hospital in eight years. Officials noted that the expansion and facility improvements will better enable the hospital to meet the behavioral health needs of seniors in the community.

"The Haven Senior Horizon's team is very passionate about providing excellent care to Senior's with behavioral health needs in the State of Arizona. With the renovations and expansion of our hospital beds, we will be able to provide this vulnerable population a much needed service," commented Kathy Shaw, CEO of Haven Senior Horizons.

The hospital's operations have been unaffected by the construction and is scheduled to open the Juniper unit for admissions on March 23, 2016.

"This facility improvement should be sufficient to allow Haven Senior Horizons to serve the inpatient mental health needs for seniors for the next 10 years," said Shaw. "Combining efficient physical space with our excellent medical staff and hospital employees, and the latest clinical technology will enhance our ability to continue to provide our patients with the highest quality care possible," added Shaw. "We are excited about assuring the continued availability of excellent healthcare services in our area for years to come."

Haven Senior Horizons provides inpatient psychiatric stabilization and treatment to older adults experiencing acute symptoms of depression, anxiety, mood swings or psychosis.
