

A Breakthrough for Women: Vaginal Rejuvenation without Surgery

Juliet™ Laser Treatment - The Gentle Solution to Feminine Rejuvenation

FOR IMMEDIATE RELEASE

Description: Finally, a breakthrough for women! Zarin Medical is proud to present a gentle solution to vaginal rejuvenation. The new Juliet™ outpatient laser treatment helps to reverse the effects often associated with female aging and childbirth.

Knoxville, Tennessee – Finally, a breakthrough for women! Zarin Medical is proud to present a gentle solution to feminine rejuvenation. The new Juliet™ procedure helps to reverse the effects often associated with female aging and childbirth. Patients with symptoms of aging, such as laxity, atrophy, pain and leakage, can now get relief from these and other issues with the Juliet laser treatment. Juliet is a fast, painless treatment performed in-office, with low risk of side effects and minimal downtime. The procedure takes less than 15 minutes and can be performed without the need for anesthesia. Furthermore, it requires no incisions or sutures.

Different ages of a woman's life are accompanied by changed experiences with her intimacy and her sexuality. These can strongly affect the quality of life for a woman – physically and psychologically, as well as sexually. Many women who experience upsetting symptoms such as poor lubrication and even pain during intercourse, do not like to talk about these issues. Instead, they suffer in silence, feeling ashamed and thinking they are the only ones with these problems. Actually, all these symptoms are quite common in women of different ages and tend to worsen over time. This means that they are not temporary issues that may go away or disappear if left untreated.

Until recently, all these conditions were considered a consequence of aging and part of inevitable changes in a woman's body. Treatments for these conditions were undertaken only in very rare cases, where serious medical conditions were recognized because of the high risks associated with available surgical or pharmacological treatments. Common side effects for those treatments might include wound disruption, postoperative bleeding or fistula formation.

Today, an increasing number of women are becoming aware of the possibility to improve the tone and functionality of the gynecological area and consequently their quality of life, with minimally invasive procedures, such as the Juliet Laser Treatment.

Studies show that most Juliet patients notice reduction in their symptoms immediately after the first treatment. Elasticity, lubrication, thickness, and softness are often regained, along with reduce and elimination of itching, irritation and pain during intercourse. For those experiencing leakage when they cough or exercise, the effects are greatly reduced or eliminated. The beneficial effects of the Juliet continue after the treatment and women report further improvements for months after treatment.

Dr. Richard Dittrich says, “Before Juliet, there was very little you could do, outside of surgical procedures. The Juliet treatment, on the other hand, is performed using an Erbium:YAG laser to selectively stimulate both the outer mucosal layer and the deeper, submucosal layer. This leads to long-term improvement of the tissue and a restoration of its original metabolism.”

While the Juliet has been available for years in Europe, Asia and other parts of the world; the FDA has now cleared the system for the USA!
