

alta californica BOTANICALS CANNABIS THERAPY TINCTURES™

The Science and Facts behind Alta California Cannabis Therapy™

- Cannabinoids are complex molecules produced in the cannabis plant and in our bodies as well.
- The cannabinoid Anandamide, discovered in 1992, is naturally produced by our bodies and is responsible for keeping us balanced and healthy on a foundational level. Cannabis cannabinoids enter the body through the same pathways as Anandamide.
- Cannabinoids are able to alleviate a wide range of symptoms and incurable ailments because they work from this foundational position. Remember, symptoms are your body's way of communicating with you
- EndoCannabinoid Deficiency is a real ailment and balancing it leads to better health
- The universal dose is 10mg cannabinoids/100 lbs body weight
- Start with less, then trust your body's wisdom to find the right dose, and adjust as you change. You know your body better than anyone else!
- THCA and CBN – Two known healing cannabinoids
- The cannabis plant naturally produces THCA, not THC.
- THCA is non-psychoactive. It must be heated, hence smoking, to produce THC. THCA is 50% more effective as an anti-inflammatory than THC.
- CBN is what THCA naturally becomes as the plant reaches the end of its life cycle. In the proper combination with THC it is an incredibly effective sleep aid with no side effects.

Alta California Cannabis Therapy Tinctures At A Glance

Pain Relief INTERNAL Non-Psychoactive

Target Indications:

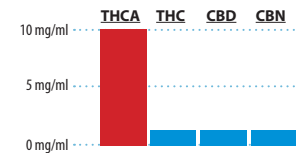

- Chronic Pain
- IBS & Crohn's
- Arthritis
- Trauma
- Epilepsy

Pain Relief EXTERNAL Non-Psychoactive

Target Indications:

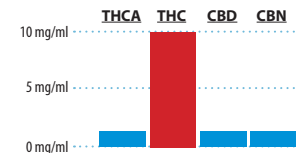

- Topical Inflammation
- Cuts & Bruises
- Bites
- Repairs skin
- Herpes on lips, etc.

Stress Relief Psychoactive

Target Indications:

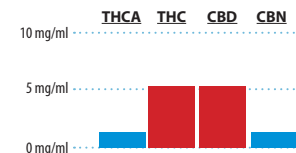

- Appetite Stimulation
- Writers Block
- Sexual Arousal
- Cancer
- Migrane

Spasm Relief Mild Psychoactivity

Target Indications:

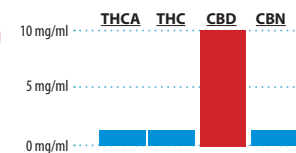

- Multiple Sclerosis
- Neuropathy
- Chronic Pain
- Spinal Cord Injury
- Migrane

Anxiety Relief Psychoactive De-Activating

Target Indications:

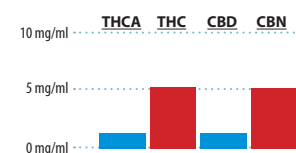

- Appetite Suppression
- Depression & Anxiety
- PTSD
- Migrane & Seizures
- Cancer

Insomnia Relief Mild Psychoactivity Sedative

Target Indications:

- Insomnia
- Cancer
- Fibromyalgia
- Migraine

We at Alta California believe in the innate wisdom of our bodies and the primacy of personal experience. We have seen and experienced the power of Cannabis Therapy in its efficacy for relieving symptoms plus broad balancing powers toward health and greater well-being. We infuse all our tinctures with the best in scientific research and experiential feedback from our clients.

Healing is a life long process. Alta California Cannabis Therapy products are here to support you on that journey.

Alta California Cannabis Therapy Tinctures™ are powerful tools to help alleviate a wide array of symptoms and bring your health back into balance.

Pain Relief Tincture™ INTERNAL

Anti-Inflammatory/Non-Psychoactive

This Cannabis Therapy Tincture™ is cold extracted THCA from sustainably grown whole plant cannabis. THCA has been shown to be better than CBD for regulating and rebuilding EndoCannabinoid functions. It is known to relieve pain due to inflammation

and to have analgesic and anti-spasmodic properties along with improved effectiveness when used with other cannabinoids. If you are experiencing imbalance in your EndoCannabinoid System (e.g.: spasms, seizures, fatigue, chronic pain, etc.), this is the primary cannabinoid you need to rebuild your system.

In addition to its anti-inflammatory effects, it has anti-viral and anti-bacterial effects. Each ml contains approximately 10 mgs of THCA. The other cannabinoids present THC, CBD, and CBN are under 1 mg per ml. That is well below the psychosomatic threshold of 5 mg per 100 lb but enough to trigger the “cannabinoid entourage” effect.*

Pain Relief Tincture™ EXTERNAL

Anti-Inflammatory/Non-Psychoactive

This external Cannabis Therapy Tincture™ is cold extracted THCA from sustainably grown whole plant cannabis. The acidic cannabinoids build the infrastructure of your EndoCannabinoid System. THCA provides anti-inflammatory relief for any topical trauma.

It is effective with viral infections on the gums and lips. Excellent relief for topical inflammations (e.g.: bug bites)

In addition to its topical anti-inflammatory, it has topical anti-viral and topical anti-bacterial effects. This highly concentrated tincture is to be applied topically directly on the inflamed area or on the associated acupressure point.

* The Cannabinoid Entourage Effect refers to the effect that occurs when individual cannabinoids are combined to work together.

Every batch of Alta California tinctures is guaranteed for potency and purity by third party testing through SC Labs. Analytics for each batch is available on www.sclabs.com.

Stress Relief Tincture™ INTERNAL

Psychoactive/Appetite Stimulant
Increase Creativity

This Cannabis Therapy Tincture™ is extracted from sustainably grown whole plant cannabis that is high in THC. THC is the cannabinoid that most people associate with getting “high”. Taken in an oral form it is 2 to 3 times more psychoactive than if it is smoked.

This relieves stress by activating your central nervous system. If you are experiencing creative blocks, fatigue and certain kinds of chronic pain and you enjoy or tolerate psychoactivity this is the primary cannabinoid that will bring you relief

Each ml contains approximately 10 mg of THC. The other cannabinoids present THCA, CBD, and CBN are under 1 mg per ml. That is well below the psychosomatic threshold of 5 mg per 100 lb but enough to trigger the “cannabinoid entourage” effect.

Spasm Relief Tincture™ INTERNAL

Mildly Psychoactive

This Cannabis Therapy Tincture™ is extracted from sustainably grown whole plant cannabis that are medium THC and medium CBD strains.

THC and CBD manage your immediate experience. If you are experiencing imbalance

in your endocannabinoid system (ECS), such as chronic pain, MS, neuropathic pain and seizures, and other treatment resistant conditions and you cannot tolerate strong psychoactivity, this is the tincture that will bring you relief

Each ml contains approximately 5 mg of THC and 5 mg of CBD. The other cannabinoids present THCA and CBN are under 1 mg per ml. That is well below the psychosomatic threshold of 5 mg per 100 lb but enough to trigger the “cannabinoid entourage” effect

15 ml dropper bottles contain approximately fifteen adult doses.
One full dropper per every one hundred pounds of body weight.

Anxiety Relief Tincture™ INTERNAL

Psycho-Deactivating
Appetite suppressant/Anti-Depressant

This Cannabis Therapy Tincture™ contains is extracted from sustainably grown whole plant cannabis that are high CBD strains. CBD decreases mental activity. If you are experiencing imbalance in your ECS such as PTSD,

anxiety, depression, over-eating, certain types of seizures or other treatment resistant conditions, this is the primary cannabinoid that can bring you relief.

In addition to its anti-anxiety effects generated by decreasing mental activity, it is a neuron protectant and antioxidant. Each ml contains approximately 10 mgs of CBD. The other cannabinoids present, THCA, THC, and CBN, are under 1 mg per ml. That is well below the psychosomatic threshold of 5 mg per 100 lb but enough to trigger the “cannabinoid entourage” effect.

Insomnia Relief Tincture™ INTERNAL

Sedative/Mildly Psychoactive

This Cannabis Therapy Tincture™ contains CBN and THC. CBN is a late stage cannabinoid that naturally occurs when buds are left out in the air and light. CBN is responsible for regulating the plant’s “sleep cycle” and can help improve the quality of your sleep in a natural manner. If

your symptoms include insomnia, fibromyalgia, and neuropathic pain, CBN and THC are the cannabinoids that can bring you relief.

By combining even ratios of THC and CBN with smaller amounts of THCA and CBD, our Insomnia Relief Tincture allows users to attain a full, undisturbed sleep, in part by mitigating sleep apnea and other causes of nighttime tenseness

Each ml contains approximately 5 mg of THC and CBN. The other cannabinoids present THCA and CBD 1 mg per ml. That is well below the psychosomatic threshold of 5 mg per 100 lb but enough to trigger the “cannabinoid entourage” effect.

Remember that a healthy life is best supported by a healthy lifestyle that includes good diet, exercise, fresh air, sleep, friends, and don't forget, fun.
