

1. **SteamaCo** connects to multiple assets through our **bitHarvester** smart meters

2. **bitHarvester** acts like a powerful remote switch and data logger, keeping those assets in constant contact with our Cloud.

3. Users then manage any number of connected assets in real time through a unified online interface.

- Solar PV and wind 
- Fuel pumps and generators 
- Water mains 
- Electricity mains and appliances 
- Many other sensors
